

Lambda_c+ decays at BESIII

BESIII has collected 4.5 fb^{-1} of e^+e^- collision data between 4.6 and 4.7 GeV. This unique data offers ideal opportunities to study Λ_c^+ decays. We will report the observation of $\Lambda_c^+ \rightarrow n \pi^+$, the observation of $\Lambda_c^+ \rightarrow p K^- e^+ \nu$, and the form factor measurement in $\Lambda_c^+ \rightarrow \Lambda e^+ \nu$. Meanwhile, we will report prospect on semileptonic and hadronic decays of Λ_c^+ in the near future.
