## Abstract

Put your abstract here.

## Document Status Sheet

1. Document Title: Muon ECS Upgrade			
2. Document Reference Number: LHCb-XX-2020			
3. Issue	4. Revision	5. Date	6. Reason for change
Draft	1	April 14, 2020	Half of the first version
Draft	2		
Final	1		

## Contents

1	Introduction	1
2	Hierarchy	2
3	Front End Electronics	2
3.1	Pulse Distribution Modules	2
3.1.1	Data Point Structure	2
3.1.2	Libraries and Function structures	2
3.1.3	High level panels	2
3.2	Service Boards	2
4	Off Detector Electronics	2
5	High Voltage System Control	2
6	Low Voltage System Control	2
7	Tell40 Control	2
8	Conclusion	2
9	References	2

## 1 Introduction

The muon detector of the LHCb experiment, after the ongoing major upgrade, will be composed of only 4 stations (instead of the previous 5) which will comprise 1104 multi-wire-proportional-chambers (MWPC) with more than 100000 readout channels.
