

Welcome + brief news

**Karsten Riisager, Aarhus University
INTC chair**

- Most nuclear physics facilities (with main focus on nuclear structure questions) have a time-out policy for approved experiments
- INTC believes this to be appropriate as general policy
- The CERN LS-x/Run-x pattern provides a natural time structure

- In special cases longer time scales may be needed
- Experiments may ask to retain (remaining) shifts

RB endorsed the new policy for INTC in September

- Two outgoing INTC members
 - currently one “empty seat”

- New chair from April 1, 2020
 - expect last status reports to be given in February
