## The transverse spin structure of the nucleon: overview and perspectives of COMPASS SIDIS measurements

*Monday 3 February 2020 09:45 (25 minutes)*

The SIDIS data collected from 2002 to 2010 in COMPASS using a high energy muon beam and transversely polarised proton and deuteron targets, have allowed to performed many unique measurements. In this talk the main results and their interpretation, as well as the new expected measurements, will be reviewed. The need of the more deuteron data and the perspectives from the future COMPASS data taking will also be summarised.
