Powerful document collaboration: Online, Desktop, Mobile

Monday 27 January 2020 17:00 (20 minutes)

ONLYOFFICE by Ascensio System SIA is an HTML5-based online office for editing text documents, spreadsheets and presentations online and collaborating on them in real time. Relying on three core principles - innovative technology, high security standards and smart service architecture - ONLYOFFICE reached wide applicability in multiple spheres of business and public structures worldwide.

With an established technological ground ensuring browser-agnostic content display, maximum OOXML compatibility and seamless collaborative data transfer, ONLYOFFICE focused on enhancing the workflow flexibility. Rich cloud and local editing experience is equally accessible from web, desktop and mobile clients, with security aspects and third-party integration strategy in mind.

Having a strong focus on integration into Sync&Share platforms, ONLYOFFICE angled its development strategy via technological partnerships with solution developers such as Nextcloud, ownCloud, Seafile, Pydio and others.

This year's presentation will cover:

- Technological ground of ONLYOFFICE solutions;
- Recent versions of ONLYOFFICE online editors;
- Roundup of the recent integration app releases;
- Mobile editing and integration of mobile apps for iOS, iPadOS and Android;
- ONLYOFFICE Desktop Editors integration;
- Data protection and access rights management;
- End-to-end encryption of documents at rest and in editing; ONLYOFFICE roadmap.
