## **Collabora Online: secure, on-premise collaborative editing**

*Monday, 27 January 2020 17:40 (20 minutes)*

Come and hear how Collabora Online can give all the security benefits of much more complex architectures, while allowing de-centralized, on-premise hosting.

Hear about the significant improvements in functionality in the last year everywhere from a myriad of interoperability improvements with UX and Mobile wins, as well as Global Scale integration, and an initial WOPI-like locking implementation. Hear some thoughts on how our simple architecture allows easy deployment, simple scaling, high availability and more for your EFSS.

**Primary author:** Mr MEEKS, Michael (Collabora)
