ownCloud infinite scale - Concepts, Protocols and Extensions

Monday, 27 January 2020 14:30 (15 minutes)

Do you know what makes a reliable sync and share platform? At ownCloud we have been able to iterate on your feedback and rethink some of the underlying concepts of our architecture. In this session we will examine the most important paradigm shifts and explain how they led us to the different open protocols that we are building the new architecture upon. Finally, we are going to give an overview of how these protocols allow building extensions in multiple languages and even allow end users to run custom code without affecting the core stability of the platform.
