## Airbnb-for-cars

This is a brand new project we're pitching to an investor. Basic idea is to build an **Airbnb for cars**: people can rent out their cars.

## Suspicious login detection

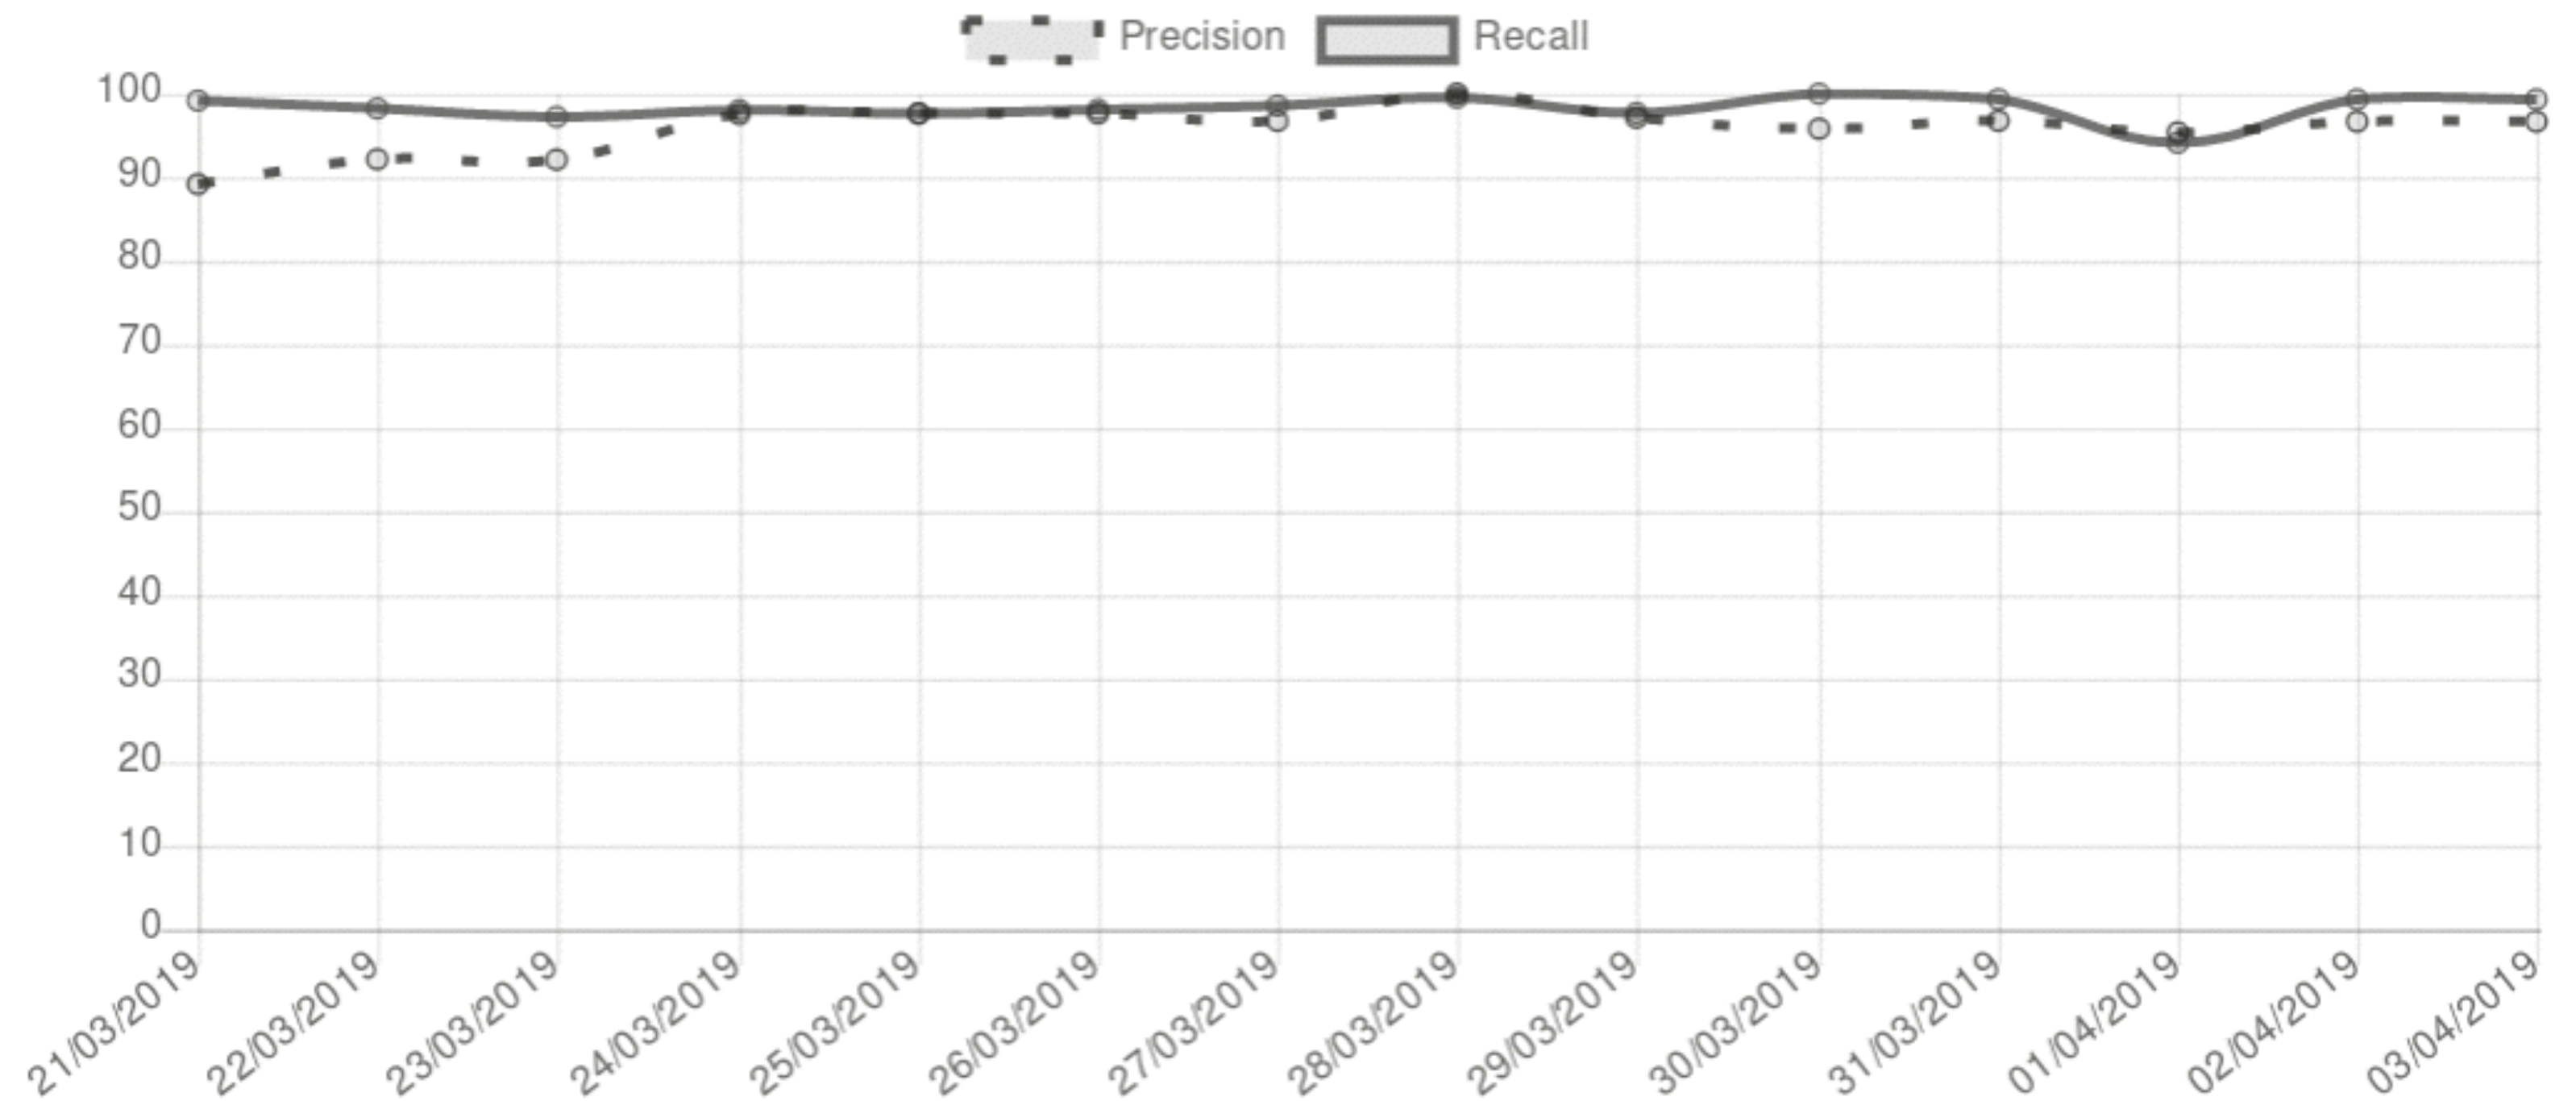

The suspicious login app is enabled on this instance. It will keep track of IP addresses users successfully log in from and build a classifier that warns if a new login comes from a suspicious IP address.

### Training data statistics

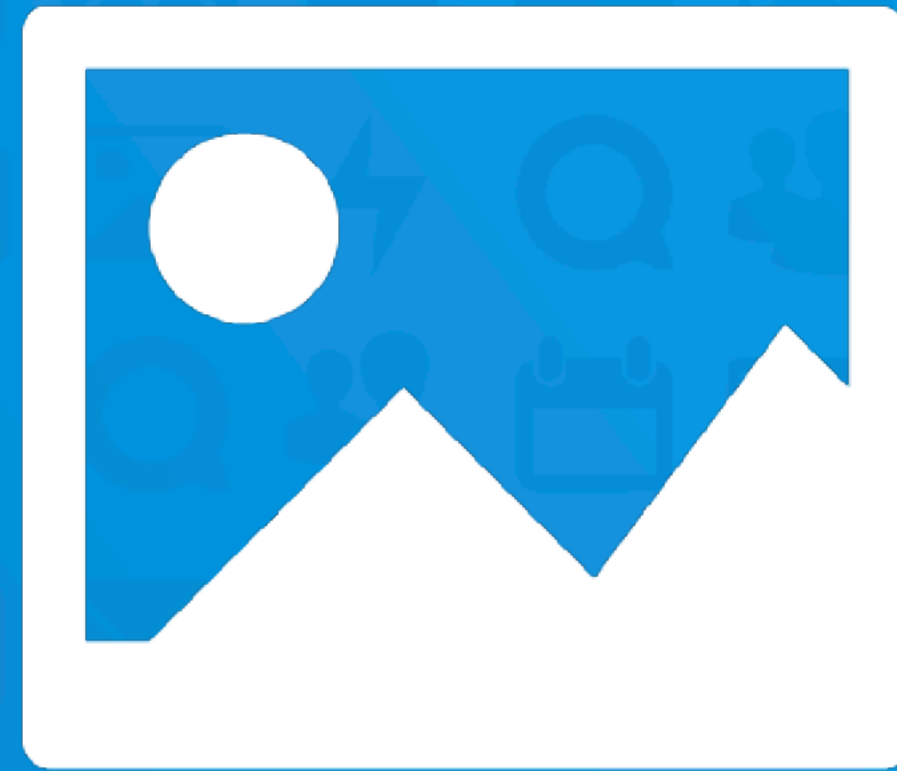

So far the app has captured 258058 logins (including client connections), of which 591 are distinct (IP, UID) tuples.

### Classifier model statistics

During evaluation, the latest model (trained 18 hours ago) has shown to capture 99.315% of all suspicious logins (recall), whereas 96.667% of the logins classified as suspicious are indeed suspicious (precision). Below you see a visualization of historic model performance.

A diagonal stripe of a slightly darker blue runs from the top-left to the bottom-right. Centered on this background is the text "Availability Today" in a white, sans-serif font.
