

Nextcloud, Interoperability & Open Standards

- **Successful Open Standards** evolve out of a **real world implementation** which solves existing problems for existing users, like **OCM**.
- **Good Open Standards** need to be **minimalistic** and **complete**.
- **Nextcloud** is full of **Open Standards** like ***DAV, ActivityPub, OCM, WebRTC, WOPI, etc.**
- If there is no **Open Standard** we push for one, see **OCM**.
- What we would like to see regarding **OCM**
 - Publication of a 1.0 version based on what we already have
 - Extend beyond files, new (optional) share types for calendar, contacts and federated communication, ...
- **Nextcloud** is completely **Open Source**, with **no barriers to enter**. If you think a **Open Standard** is missing and would be useful... **contribute, we are open!**
