WOPI and Custom Apps in the CS3 APIs

Tuesday 28 January 2020 14:10 (5 minutes)

WOPI is a well-known standard for Office apps interoperability, used by Microsoft Office 365 and Collabora Online.

In this contribution, we will look into the integration of WOPI-compliant applications in the ecosystem foreseen by the CS3 APIs. In particular, what is the most effective way forward to adopt WOPI? Are vendors ready to interface their Office-like applications via WOPI to cloud storages, as opposed to using custom connectors? Shall a reference implementation of a WOPI connector to the CS3 APIs be provided to ease further integrations?

We aim at a fruitful discussion with the CS3 community to further define the CS3 APIs in this respect.
