Evolving the Nextcloud ecosystem - during spare time

Monday 27 January 2020 16:33 (6 minutes)

Providing meaningful apps can be challenge when not being a
professional developer.
I created the Audio Player for Nextcloud which is one of the top active NC apps. Following a roadmap between
issues,feature requests and version updates required coordination and prioritisation - within the development
cycles as well as in private time planning.
With the new "Data Analytics"app for Nextcloud, the focus is shifting from leisure usage to more professional
use cases.
I want to outline the major challenges and achievements and motivate others to participate in open source.
Even on small scale!
