## From EFSS to Smart Workspace

*Tuesday, 28 January 2020 13:00 (30 minutes)*

600 million people and 400000 organizations around the world use Dropbox to collaborate and have been relying on our Cloud Sync and Share solution since 2007. But what does the future hold for Dropbox and its customers? In this presentation, we will give you a peek into the announcements made at our customer conference in September 2019 and the technical challenges we are solving in order to build a smart workspace for individuals and organizations across the world.

How do we incorporate cloud documents such as Google Docs or Dropbox Paper files into the sync and share ecosystem to break down silos, leverage productivity focused machine intelligence to prioritize the workspace, or build data governance capabilities for millions of users. This session will give you a look behind the scene of what is happening at Dropbox today.
