

AEgIS: plans for 2020 and beyond

- 2020:** first half of year: pursue work on positronium manipulations
- late summer: connection to ELENA
positron accumulator has to be temporarily removed
- autumn/winter: re-install, including improvements,
commission with electrons, positrons
- winter: extended laser lab and connection with existing table
- 2021:** pursue and refine pulsed production of \bar{H} , in view of
higher production rate, beam formation, deflectometer
tests

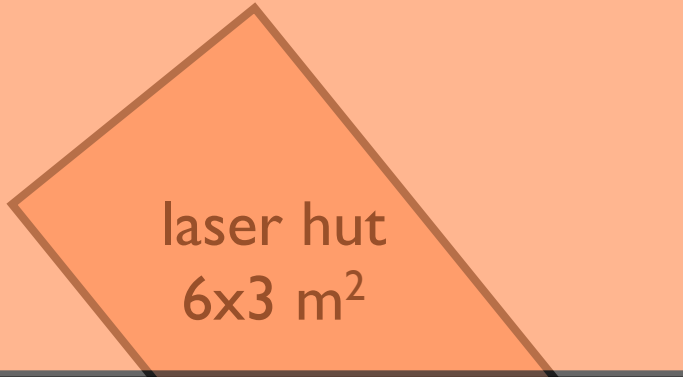

a longer-term issue: Zone layout

urgent need for:

- extended laser hut
- additional platform in zone for Ps equipment
- assembly space next to experiment
