

## ADC COMMUNICATION

---

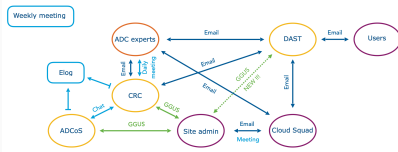

Johannes Elmsheuser

15 October 2019, ADC weekly meeting

- Please continue to use egroups as they are used now
- Encourage to use CERN Mattermost town square for operational issues: [link](#) and communication between different shift teams and experts
- Should enrich it with automated messages from Rucio and/or PanDA and/or Monitoring/Analytics of automatically detected problems (aka operational intelligence)
- ADCoS testing right now dedicated Mattermost channel for their shift communication and keeping existing jabber chatroom as backup

Rather diverse channels of communications in and between different ADC areas - see Sabine's summary in last S&C week: [link](#)

## Main communication channels between teams

Please be as open and inclusive as possible by using egroups and mattermost so that everyone in ADC remote and at CERN can participate and share the knowledge

- elog is now behind SSO has to be replaced in the near future
- ELisA (ATLAS TDAQ product) seems to be a suitable replacement candidate for elog
- Chris has setup a test instance with the help of the TDAQ admins - when ready should be tested by ADC
- Discourse as used e.g. in ROOT forum ([link](#)) could be a suitable alternative as well - any volunteers to make a test-setup and test-run ?
