Learning and Working with Geant4 Examples

- Most of the people **learn** how to use Geant4 by “playing” with an existing example
  - Choose an example as close as possible to your use-case
  - Look at the code, to see how things are done
  - Read the relevant parts of the “*User's Guide: For Application Developers*” to understand better how things work
  - Modify the example to do what you need
- Beside learning: many **real** detector-simulation **applications** originated from a Geant4 example
  - by adapting the detector description, sensitive detectors, hits, primary source, user actions, and analysis
- Bottom line: examples are very useful !

Geant4 Examples

- ***geant4/examples/***
  - ***basic/*** : oriented to novice users and covering the most typical use-cases of Geant4 applications
  - ***extended/*** : covers many specific use-cases;
    may require some additional libraries besides of G4
  - ***advanced/*** : real and complete applications for different simulation studies;
    may require additional third-party products to be built

- There are **README** files in each directory which briefly explain the content of each directory...

Geant4 **Basic** Examples

geant4/examples/basic/ :

- ***B1/*** Simple geometry with a few solids.
  Scoring total dose in a selected volume; user action classes.
- ***B2/*** Simplified tracker geometry with global constant magnetic field.
  Scoring within tracker via G4 sensitive detector and hits.
- ***B3/*** Schematic Positron Emitted Tomography system.
  Radioactive source. Scoring within crystals via G4 scorers.
- ***B4/*** Simplified calorimeter with layers of two materials.
  Scoring within layers in four ways: (a) via user actions; (b) via user data object; (c) via hits & sensitive detectors; (d) via scorer
- ***B5/*** A double-arm spectrometer with wire chambers, hodoscopes and calorimeters with a local constant magnetic field.
  Scoring used in wire chambers; G4 sensitive detector and hits used for hodoscopes and calorimeters.

Geant4 **Extended** Examples

geant4/examples/extended :

- ***analysis/***
- ***biasing/*** : event biasing, scoring and reverse-MC
- ***common/***
- ***electromagnetic/*** : many, different things...
- ***errorpropagation/***
- ***eventgenerator/*** : G4ParticleGun, G4GeneralParticleSource, HepMC, Pythia
- ***exoticphysics/*** : monopoles, phonons, ultra-cold neutrons, channeling, dark matter
- ***field/***
- ***g3tog4/***
- ***geometry/***
- ***hadronic/*** : cross sections, ions, neutron-HP, *etc.*
- ***medical/***
- ***optical/***
- ***parallel/*** : event-level parallelism
- ***parameterisations/*** : fast simulations
- ***persistency/*** : geometry (GDML)
- ***physicslists/*** : usage of Geant4 reference physics lists and physics builders
- ***polarisation/***
- ***radioactivedecay/***
- ***runAndEvent/*** : MC-true, scorers, parallel worlds, regions, readout geometry
- ***visualization/***

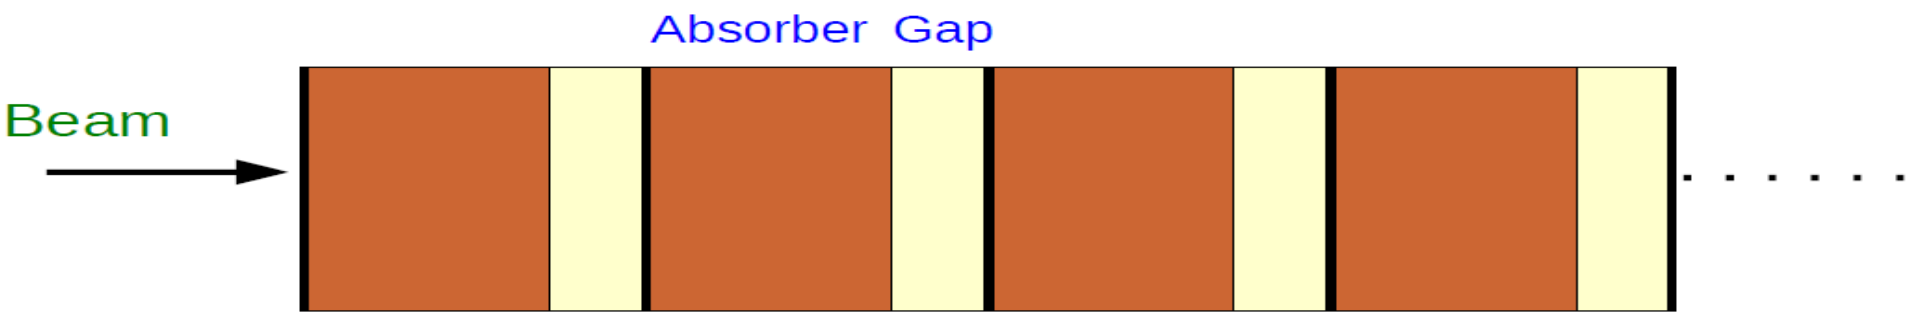
A closer look to the basic example **B4**

- ***geant4/examples/basic/B4***
  - a simple sampling calorimeter setup
  - 4 variants of scoring: - ***B4a/*** : user actions
    - ***B4b/*** : user data object (and user actions)
    - ***B4c/*** : hits and sensitive detectors
    - ***B4d/*** : scorer



- The **calorimeter** is a box made of a number of layers
- A **layer** consists of an **absorber plate** and of a **detection gap**
- The layer is **replicated**
