

# Multiverse Thinking

Pablo Garcia Tello, CERN, IdeaSquare

Idea<sup>s</sup>

Prediction is very difficult, especially if it's about the future.

**Niels Bohr**

# Despite Bohr's advice we keep on doing it... ...and proving ourselves wrong...

**"X-rays will prove to be a hoax."**

Lord Kelvin, President of the Royal Society, 1883.

**"This 'telephone' has too many shortcomings to be seriously considered as a means of communication."**

William Orton, President of Western Union, 1876.

**"I think there is a world market for maybe five computers."**

Thomas Watson, chairman of IBM, 1943.

**"Nuclear powered vacuum cleaners will probably be a reality within 10 years."**

Alex Lewyt, President of the Lewyt Vacuum Cleaner Company, 1955.

**"I predict the Internet will soon go spectacularly supernova and in 1996 catastrophically collapse."**

Robert Metcalfe, founder of 3Com, 1995.

**"There is practically no chance communications space satellites will be used to provide better telephone, telegraph, television or radio service inside the United States."**

T.A.M. Craven, Federal Communications Commission (FCC) commissioner, 1961.

So, what makes you think they will be right?

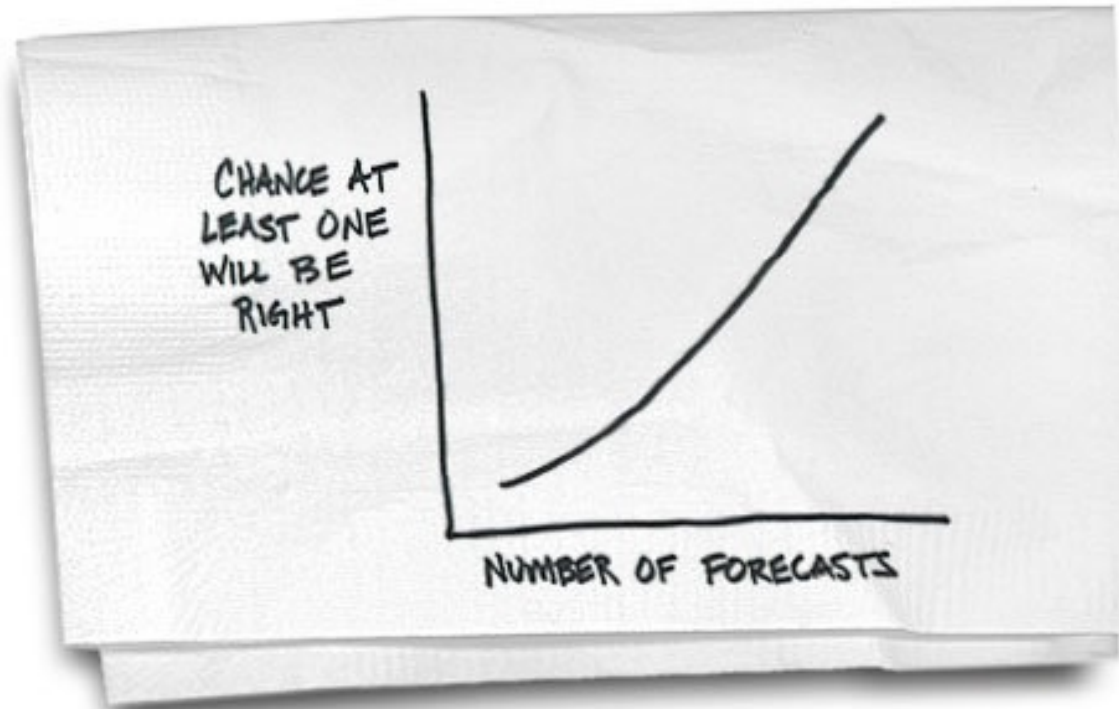

# I love future archeology cartoons!!!

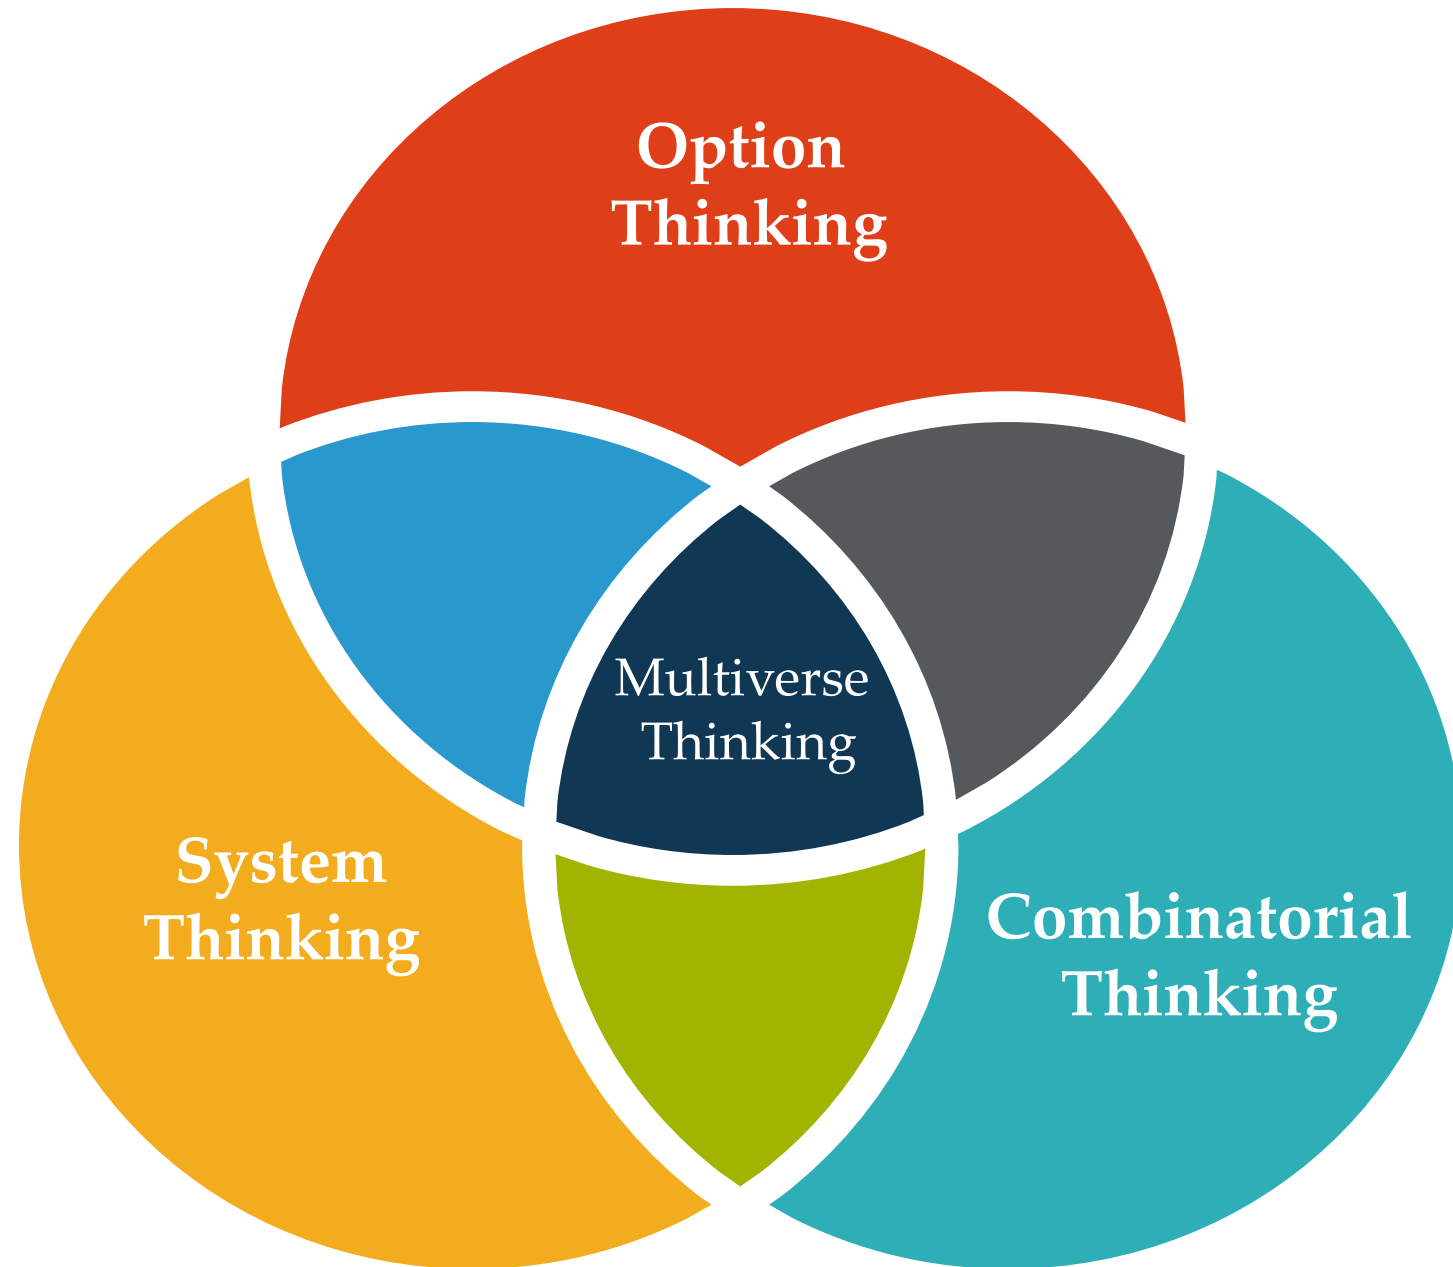

The only way to stay safe in the art of forecasting...

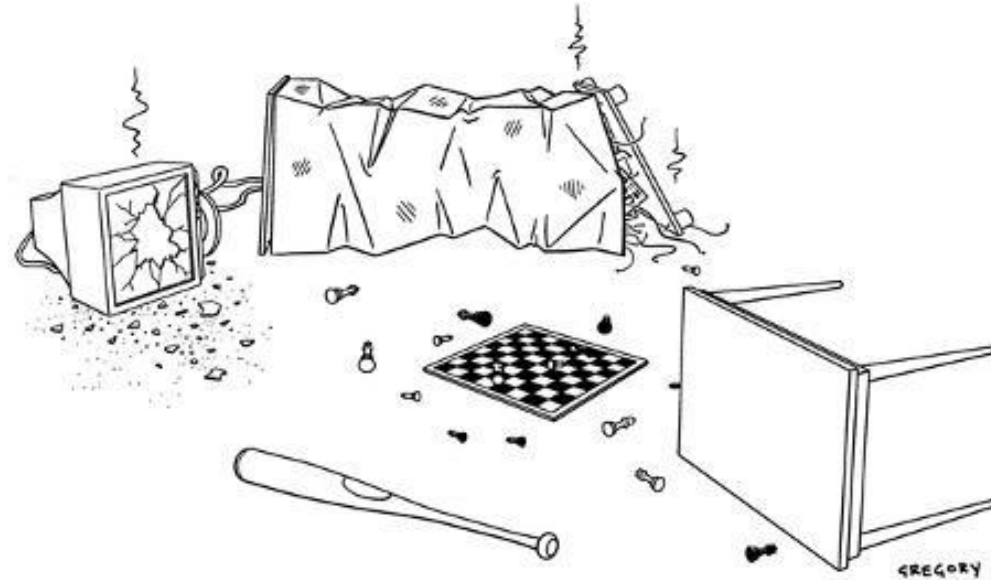

# The Multiverse Thinking (MT) Framework

Please, let me show you how to play and you decide how complex you want the game to be...

GREAT MOMENTS IN CHESS

*Backed Into a Corner by His Computer Opponent, Grand Master Garry Kasparov Switches to the Unorthodox and Risky Louisville Slugger Offense.*

# Step1: Building Block Selection: **Social Constructs** and the **Resources** as building blocks

**Social Constructs:** an idea that has been created and accepted by the people in a society.

Money  
Democracy  
Poverty  
Property rights  
Free Market  
Freedom of Expression  
Family  
Job  
Salary....

**Resources:** sources of supply or support.

Energy  
Population  
Data  
Capital  
Labor  
Water  
Food  
Education....

# Step 2: Scenario Building: Scarcity, Absence and Abundance as options

## Social Construct Scenarios

Scarcity

Absence

Abundance

## Resources Scenarios

Scarcity

Absence

Abundance

# Step 3: Scenario(s) Canvas

**Social Constructs vs Resources**

Abundance			
Scarcity			
Absence			
	Absence	Scarcity	Abundance

**Social Constructs vs Social Constructs**

Abundance			
Scarcity			
Absence			
	Absence	Scarcity	Abundance

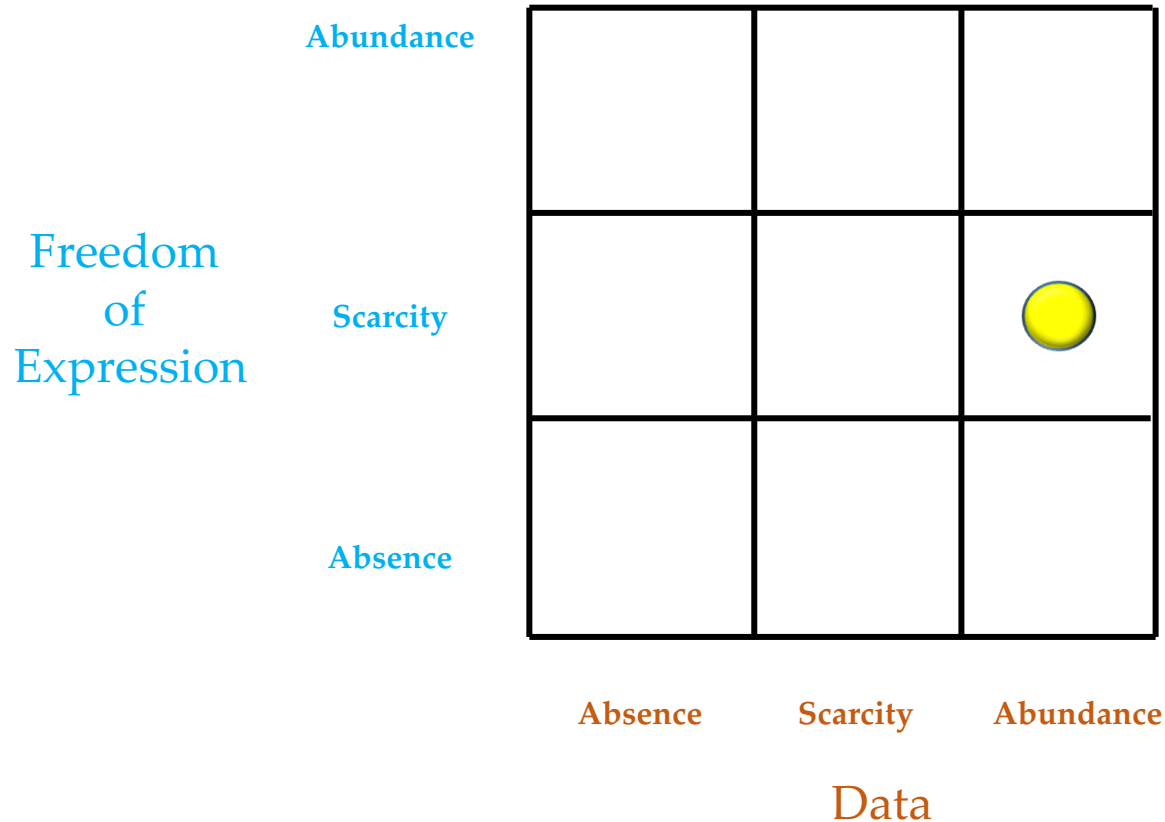

**Resources vs Resources**

Abundance			
Scarcity			
Absence			
	Absence	Scarcity	Abundance

# Step 4: Starting Point (nowadays)

## Social Constructs vs Resources

Scenario Building starts with the world as it is today

...scarcity of Freedom of Expression and abundance of Data (data is an abundant resource today)

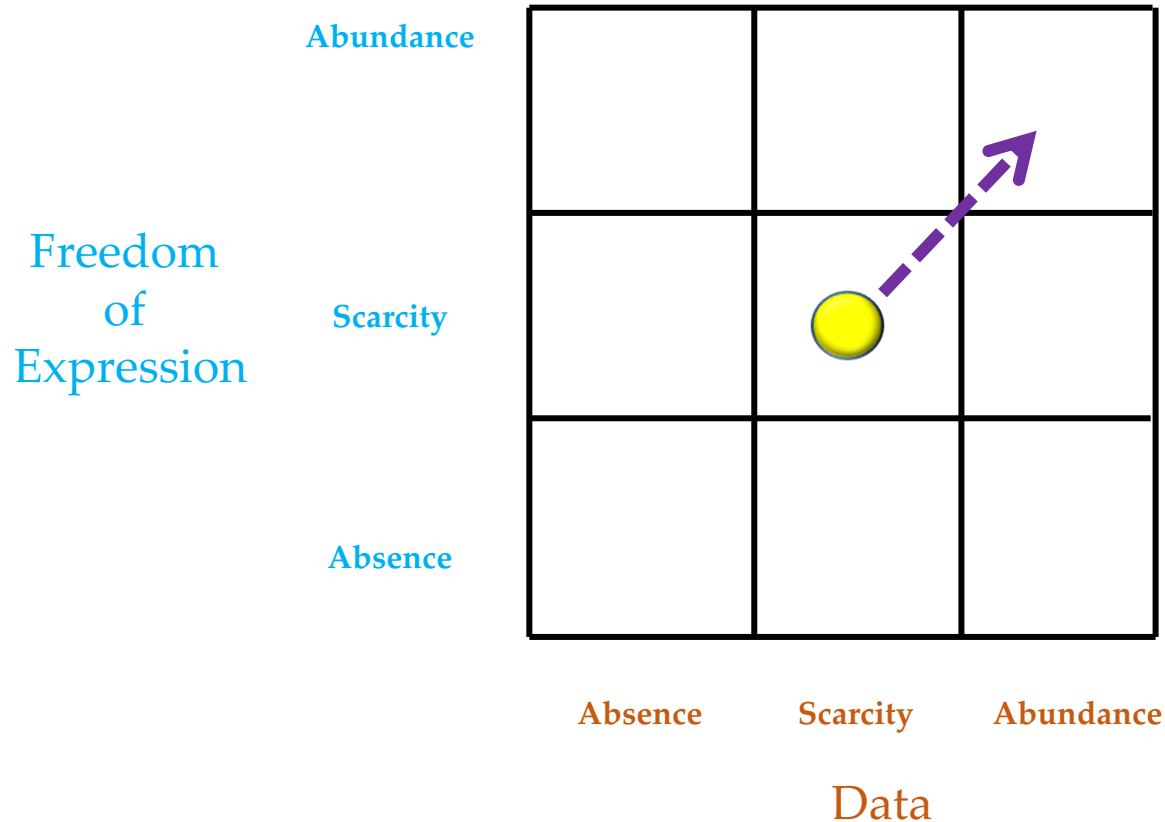

Social Construct today

Example

# Step 5: My Future (Example)

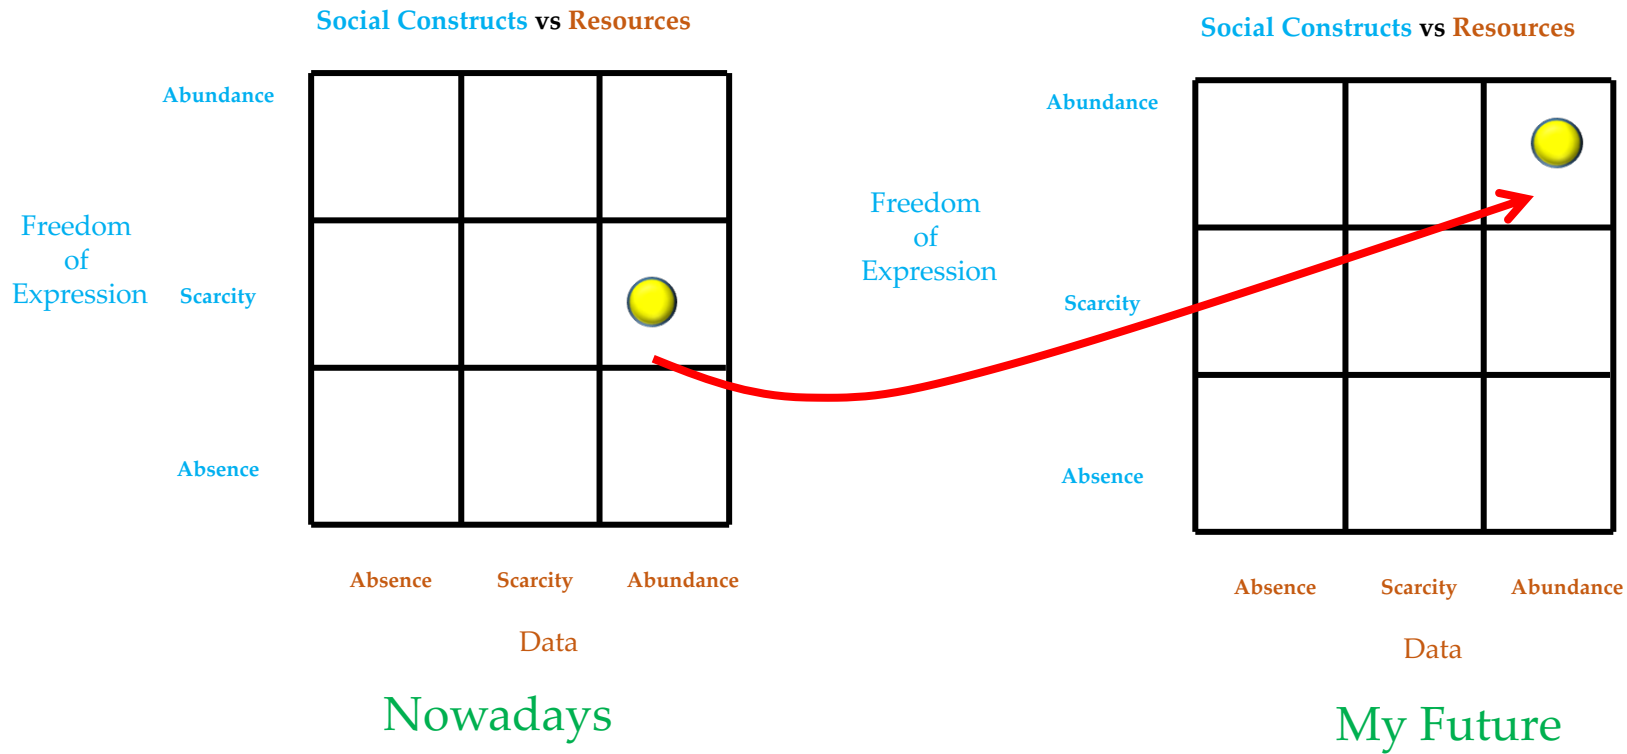

## Social Constructs vs Resources

But this is the scenario where we would like to be in

Abundance of Data creates Abundance of Freedom of Expression

The goal of MT is to propose a scope of technologies enabling the Transition

Now, we know what our transformative technology should enable

It should lead to and keep a social status quo with abundance of data and abundance of freedom of expression

# Technology Formulation (conditions)

- No violation of Physics Laws.

- No "Harry Potter-based Technology."

# Step 6: Technology Formulation Canvas

Technology				
	Modes of Production	Modes of Distribution	Modes of Consumption	Modes of Revenue
Conventional				
Unconventional				

# Step 7: Conceptual Prototype

- Since MT focuses on (far) future scenarios with envisioned not yet available transformative technologies, prototypes are conceived as conceptual compasses.
- The goal of prototyping is not instantiating a solution for a problem of today but envisioning a transformative technology not yet available considering the created scenarios.
- The Technology Formulation Canvas is taken as the specs of the not yet available technology.
- The prototypes are elaborated using drawings, conceptual pictures, cardboard models, etc, (I call it **Leonardo's approach**).

# Thanks and Questions

In another universe parallel to our own.

## A Little Exercise: Design the Future

In teams.

Choose 2 Social Constructs and 2 Resources.

Following the steps of the MT methodology:

- Start with a snapshot of the World Today
- Choose your Future in 2100 or beyond
- Consider all (Combinatorial) relations among Social Constructs and Resources
- Propose a Technology that enables your future (any technology would be valid as long as it doesn't break the laws of physics).
- Construct a narrative and present it explaining also the process you followed.
