# Control Requirements

*Thursday, 26 January 2006 17:00 (20 minutes)*

The sector test will provide an interesting milestone for the LHC control system. An overview of the infrastructure and technical systems, including the beam interlocks, that have to be in place for the test is given. The requirements on the high level software are detailed. Planning for the delivery of this software is outlined. Pre-testing of the control facilities will be vital and an outline of the test procedures and their scheduling are given.
