

Workshop Chamonix XV

Contribution ID: 84

Type: **not specified**

Layout in LSS7

Friday 27 January 2006 09:50 (20 minutes)

The sector test requires the installation of specific equipments in LHC LSS7. The layout after the continuous cryostat in IP7, to be used during the sector test, is presented. A special emphasis will be given on the installation of the temporary equipment, like the beam dump, additional shielding, radiation monitors and beam instrumentation in this region.
