

## Workshop Chamonix XV

Contribution ID: 39

Type: **not specified**

## MME Workpackages

*Wednesday 25 January 2006 16:35 (20 minutes)*

The status and perspectives of two workpackages realised in TS-MME will be presented: beam instrumentation and collimators. Concerning the monitors dedicated to the beam instrumentation, the availability of the various designs and constructions will be outlined, as well as the challenges and the critical issues related to their on-time installation. For the collimators, the advancement of the Phase I workpackage, in particular the design of the special elements and masks, will be discussed as well as the actual challenges. Indications on possible R&D for the Phase II collimators will be shortly presented.

Keywords: Collimators; Beam instrumentation; design and construction.
