Experimental equipment interacting with beam operation

Wednesday 25 January 2006 11:50 (20 minutes)

The operation of the experimental magnets and movable devices (TOTEM/ATLAS Roman Pots, LHCb VELO, ALICE ZDC, LHCf calorimeters) will interfere with beam operation. Their operation has been discussed during the last year and the main conclusions are reviewed together with the remaining open issues. Details on the communication foreseen between the CCC and the experiments' Control Rooms will be given.
