Field model deliverables for sector test and commissioning: when and what ?

Tuesday 24 January 2006 16:00 (15 minutes)

The implementation of an accurate magnetic model will be vital for efficient LHC commissioning with beam and subsequent machine performance. Given the conclusions of the RMS review, and the resource constraints, the proposed implementation of a magnetic model is described. The present state of the implementation is given along with the proposed planning for the deliverables required for the upcoming milestones.

These milestones include the sector test and initial commissioning.
