

# The smoking areas in b.865

**Law of cigarette smoking**

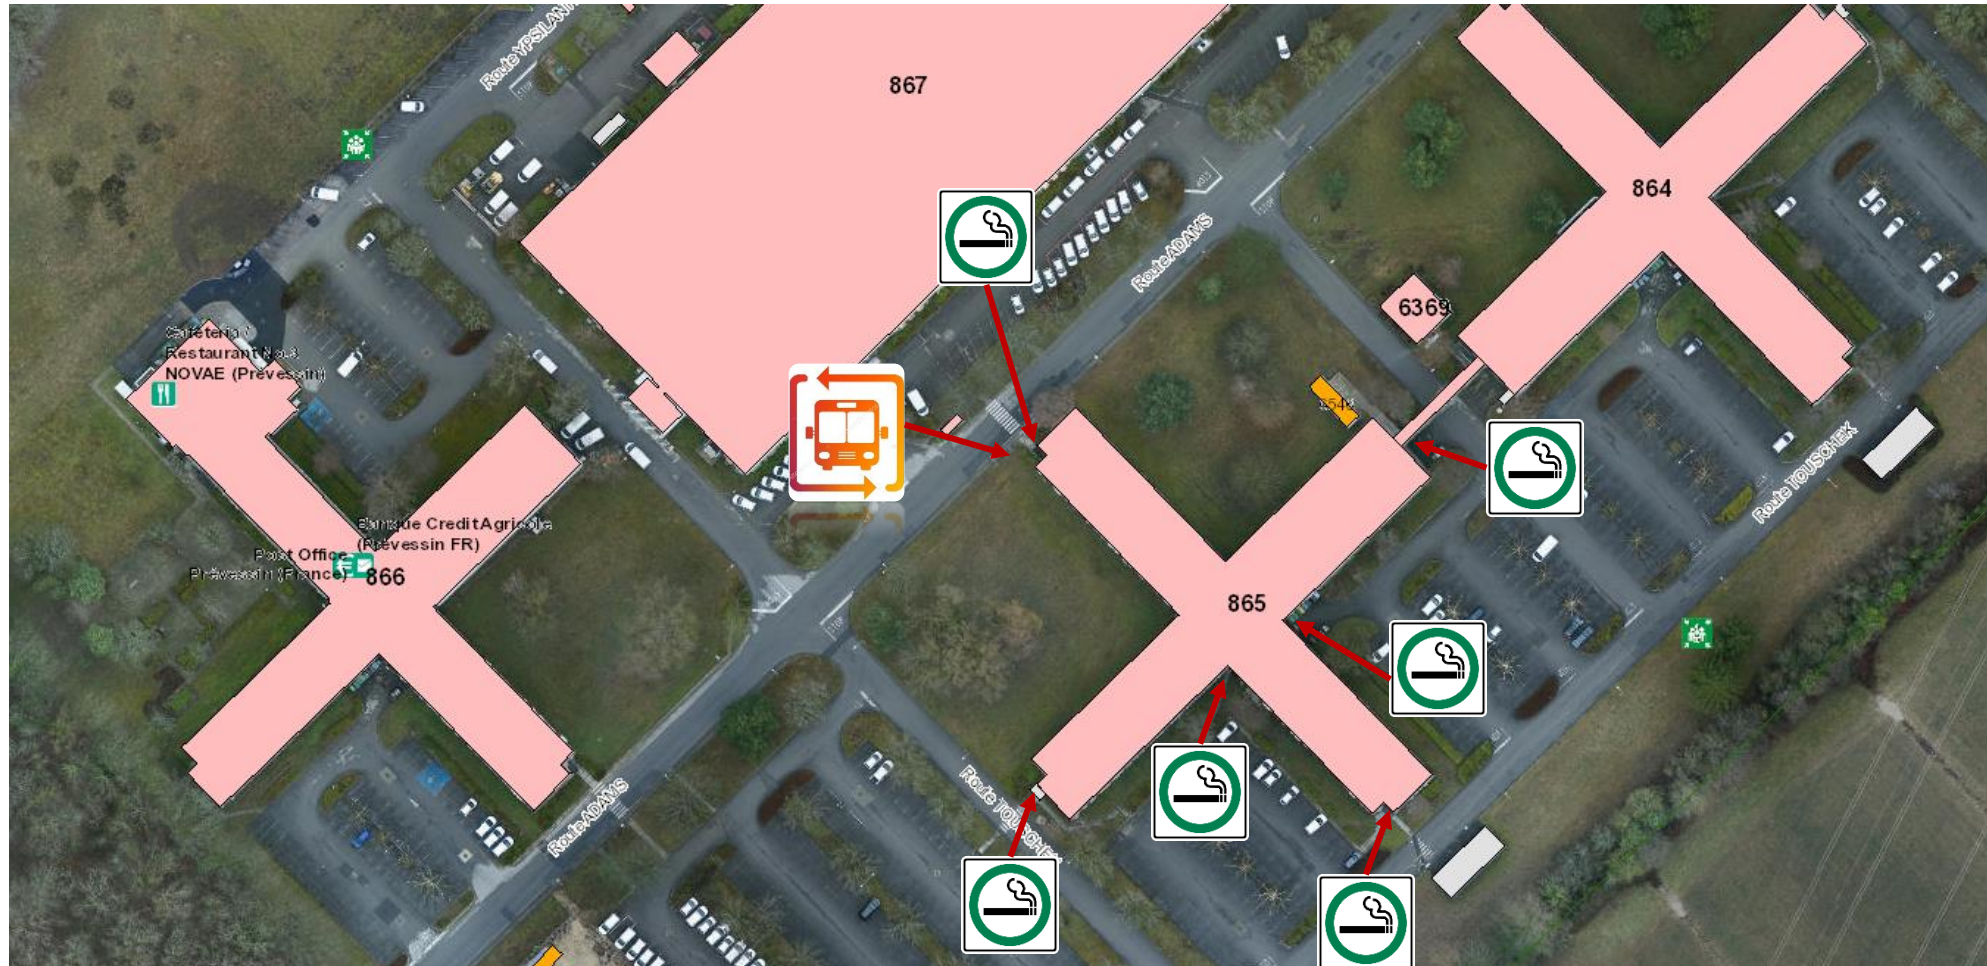

**Smoke always goes in the direction  
of non-smokers.....**

**Miro Atanasov TSO b.865**

**Departmental Safety Meeting for TSO and GSL**

**14.11.2019**

# Smoking areas around the building as of summer 2019

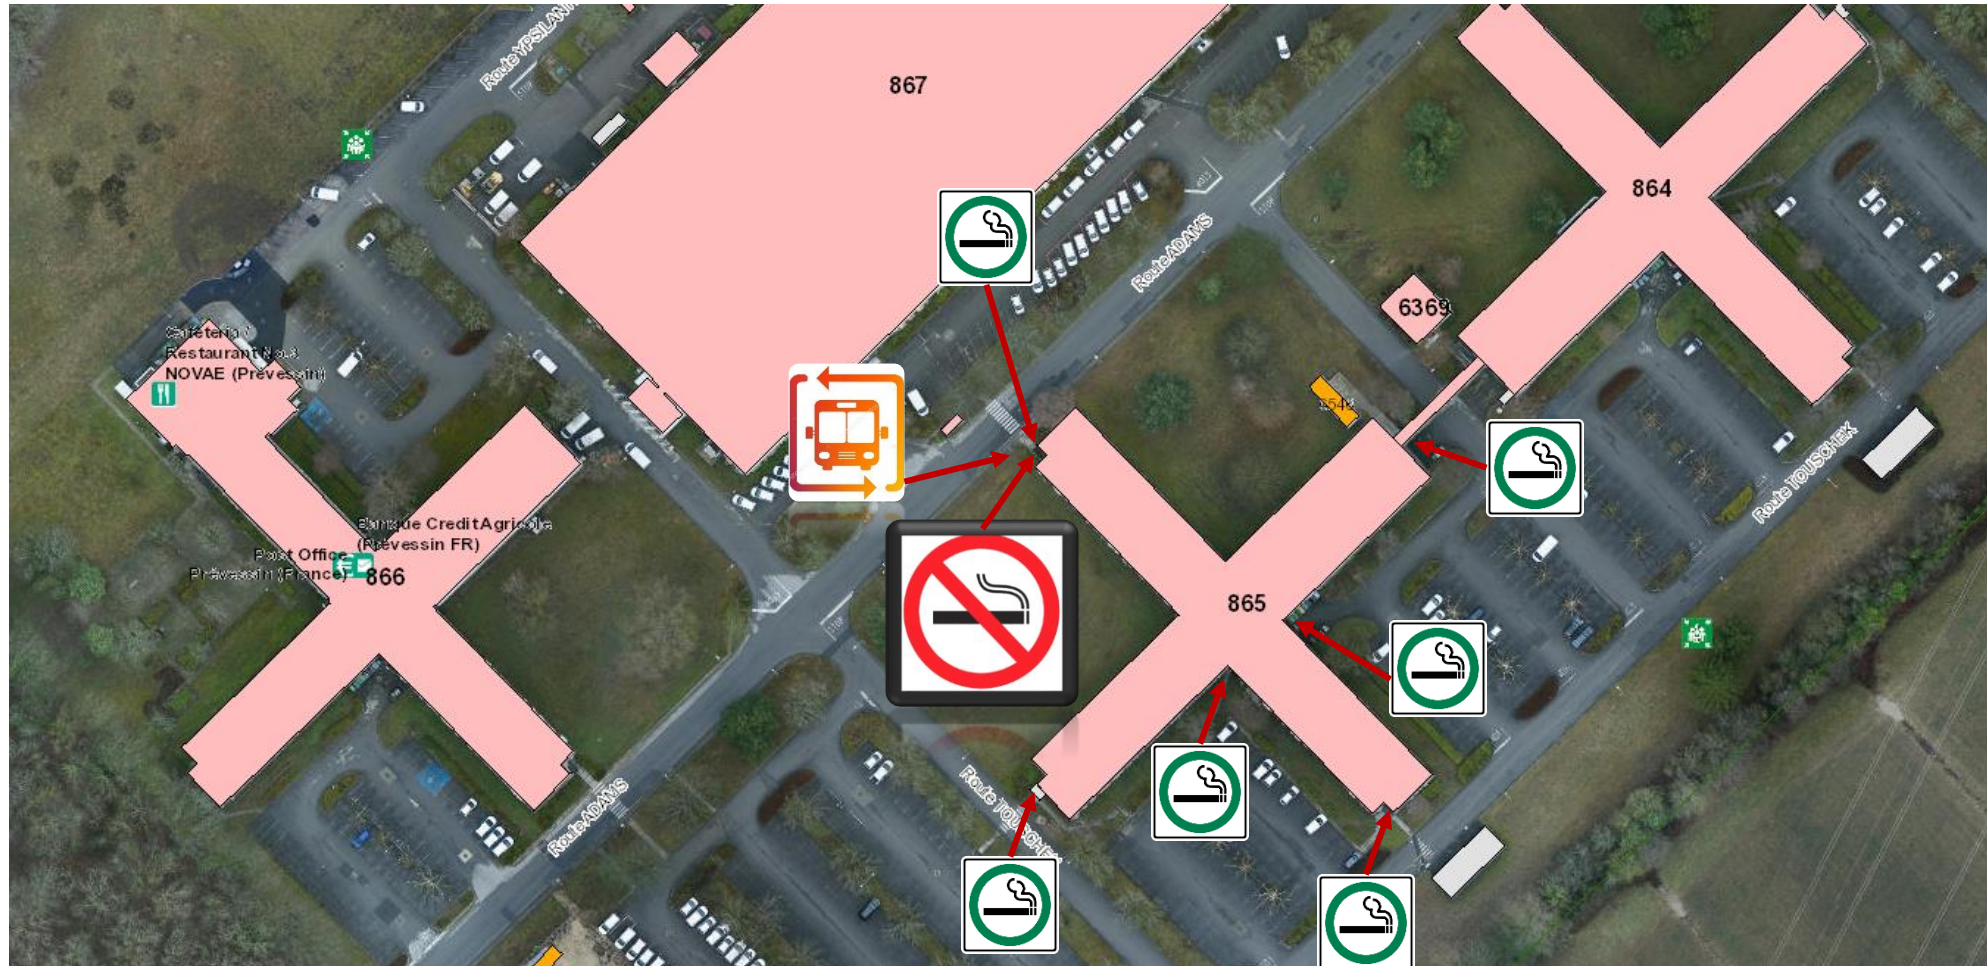

# Smoking area near shuttle stop

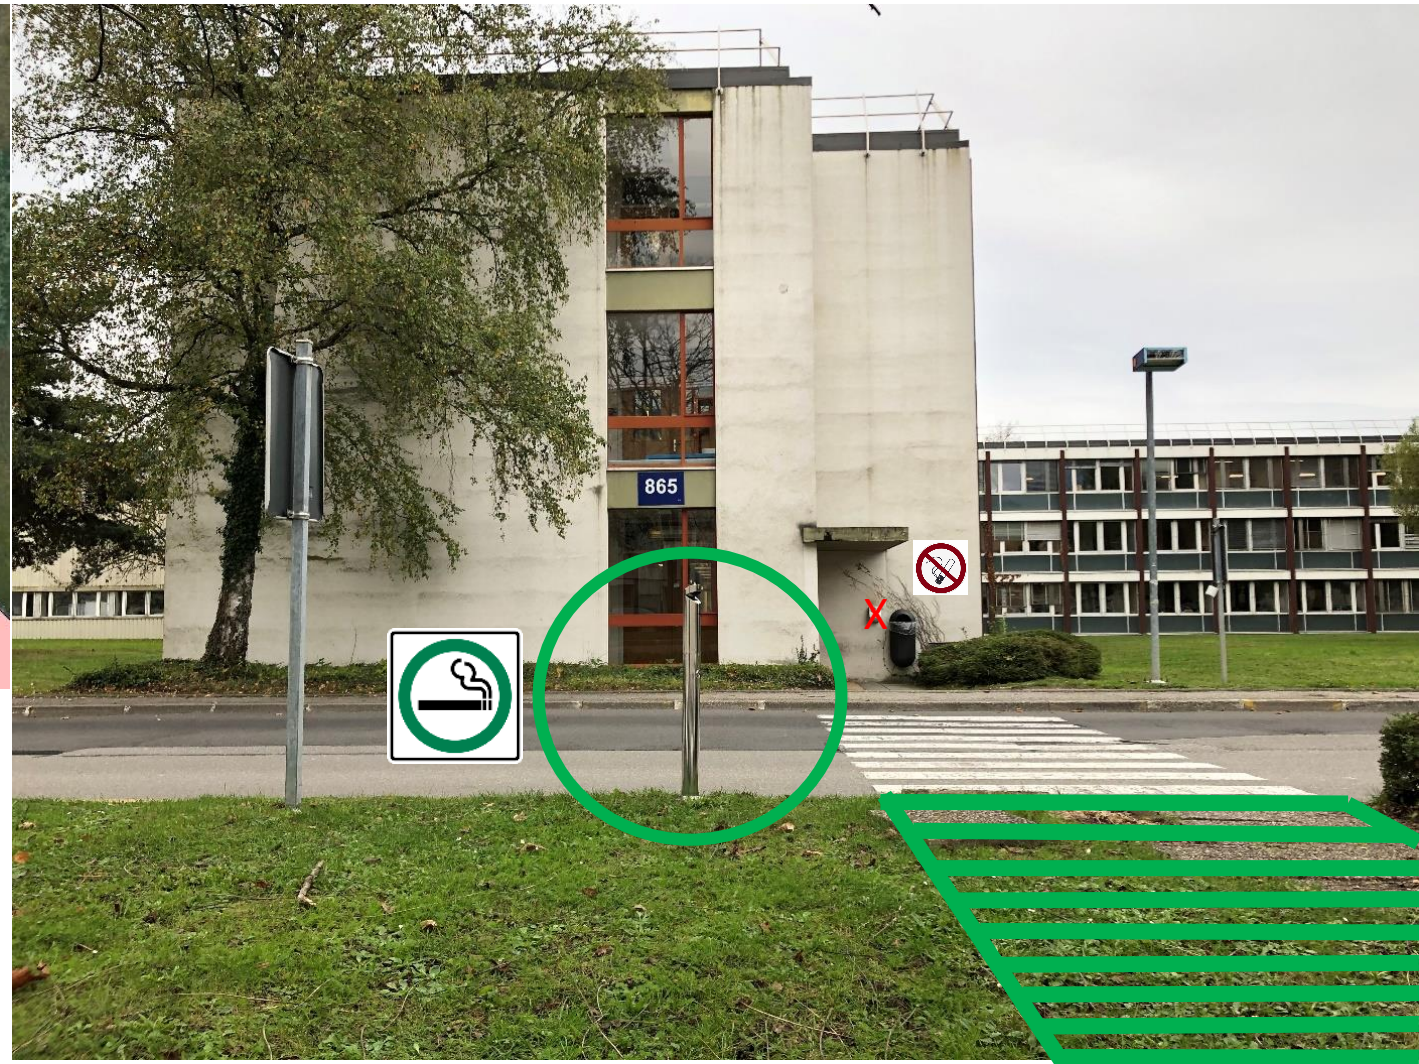

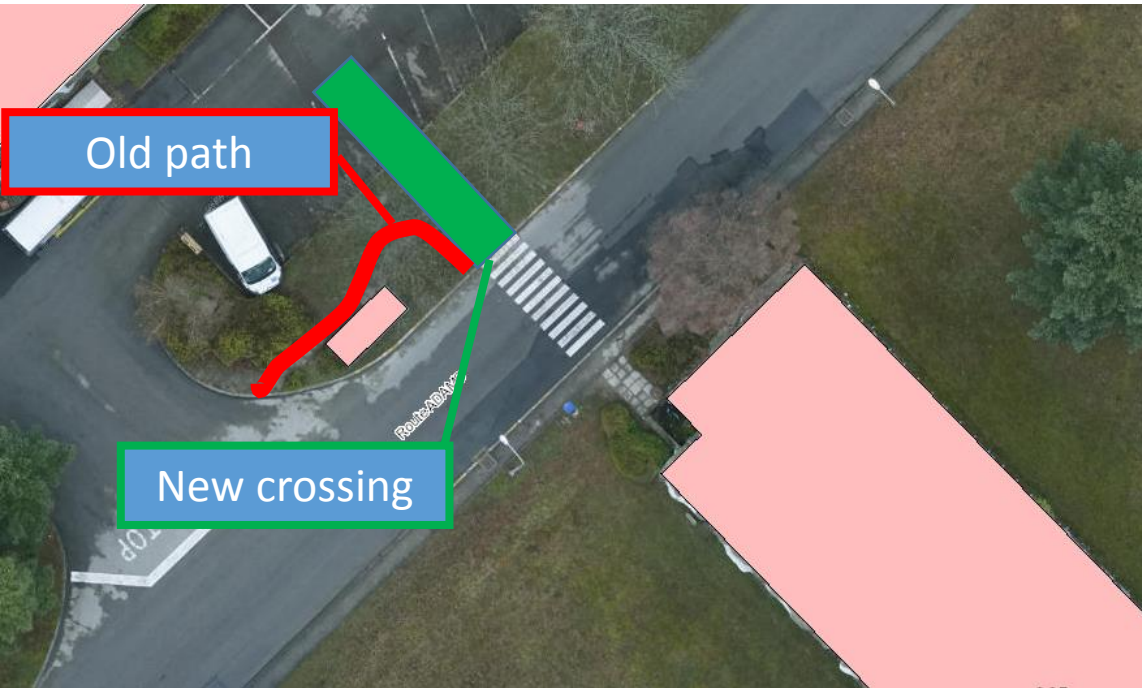

- Smoking area problematic especially in summer when windows are open -> a draft of air recirculates smoke through the corridor, first office on ground floor, and staircase.
- Drivers used to leave the shuttle bus with engine running (for air-conditioning) sometimes for over 10 minutes, while going out for a smoke.
- No current regulations specifying minimum offset from buildings for outdoor smoking areas.
- No budget (and no real need) for building a dedicated smoking shed somewhere on the green.

Due to constant nuisance – a request to move the shuttle stop and the smoking area:

... new smoking area to be integrated with the new pedestrian crossing (ongoing).

- Displace shuttle stop, request drivers turn engine off;
- Install new ashtray on other side of road;
- Remove old ashtray from wall;
- Place a “No Smoking” panel on the wall;
- Inform users politely of new arrangements.

Thanks for your attention!
