After the hangover: QuarkDB and the new namespace

Monday, 3 February 2020 14:00 (15 minutes)

In this talk we give a brief overview of the successful migration to the new namespace. Practically all EOS instances at CERN are currently on QuarkDB, the new namespace is officially *boring technology*, and *MGM boot time* a distant memory.

We will also discuss future plans and ideas to further improve scalability and performance of the namespace in particular with respect to locking, planned end-of-support for in-memory legacy namespace, and all miscellaneous namespace-related news.
