Tokens are the new Proxies

Wednesday, 5 February 2020 10:00 (5 minutes)

This presentation will summarize a new buzz technology in WLCG. In January 2020 during a hackathon at CERN the major steps to enable this technology in WLCG have been done. The talk will briefly compare the WLCG token model to the native EOS token model and discuss how WLCG token support can be enabled for HTTP(S) and XRootD access.
