# Collaboration hubs built on EOS

*Monday, 3 February 2020 16:20 (20 minutes)*

CERN is moving the majority of end-user storage use-cases to CERNBox, CERN's cloud and sync&share platform: it's now common to see many different usages, like data analysis and collaborative editing of office documents, coupled with multiple access protocols.

With EOS powering CERNBox, this presentation will talk about how the service is being used and how we plan to evolve it, making CERNBox - and EOS - the center of our collaborative future.
