## NETWORKING TOOL DETAILS

### Networking Tool description

First annual Baltic Group School of High Energy Particle Physics and Accelerator Technologies will be hosted by Riga Technical University, Latvia. This will be a week long intensive school for doctoral and graduate master's students focusing on the quantum field theories making up the Standard Model of particle physics; beyond the Standard Model physics theories; unanswered questions in particle physics and cosmology; accelerator and detector physics, technologies and their applications, including medical applications.

### Networking Tool Output

The output of this event will be comprised of a set of lecture notes, which will be built-upon and reused for future editions of this school. Furthermore, a report on the event will be prepared and discussed among the participating institutions in order to inform and improve said school events in the future. The report will also include a questionnaire that will be handed out to the participating trainees asking them to rate various aspects of the school and to suggest amendments and improvements to the event in the future.
