

# Status on sample production

- CTEQ6.1 EV vectors missing (used for D0)
  - PDF not available in LHAPDF6 -- cannot run the "chain" without extra work
- Andy Buckley (for LHAPDF team) judges the conversion of the corresponding LHAPDF5 files as "above threshold" for our purpose, but no time scale given
  - Tried to do the conversion myself following the instructions, but failed getting LHAPDF5 with Python interface running
- Once CTEQ6.1 ready for production, also propose to add the new CT18 and CT18A (A is for "ATLAS 2011 W,Z xsecs")
