

## **Coulomb excitation of odd-A nuclei 67,69,71,73Cu with Miniball and Rex-Isolde**

*Wednesday, 14 February 2007 10:30 (20 minutes)*

The low-energy levels in the radioactive neutron-rich odd-A isotopes 67,69,71,73Cu were studied by Coulomb excitation. The results allow a study of the systematic trend across the N=40 subshell closure and the residual proton-neutron interaction when neutrons start filling the g<sub>9/2</sub> orbital.
