

## **Super-allowed $0^+$ to $0^+$ beta decay at ISOLDE and elsewhere**

*Wednesday, 14 February 2007 16:50 (30 minutes)*

Results from a recent ISOLDE experiment, where the half-life of Ca38 and the beta-decay Q value were measured, will be presented and put into the context of world-wide efforts in this field. Possible new measurements at ISOLDE will be proposed.
