

# Some news on ICARUS

## Status of TPC

- Recently read-out on all layers of sense wires
- Significant coherent electronic noise on first induction wire
  - Noise subtraction being done by Tracy Usher etc.
- Data from full detector (both anodes) becoming available
- Electron lifetime of  $\simeq 1 - 1.5$  ms in the two detectors
- DAQ not integrated yet with PMTs, CRT

## ICARUS collaboration meeting (remote)

- Sep 28—Oct 1,  $\simeq 15:00$ — $19:30$  CEST
- Sessions on detector systems, data, software developments, physics studies
