The Transient high-Energy Sky and Early Universe Surveyor (THESEUS)

Saturday 5 September 2020 12:15 (25 minutes)

The Transient High-Energy Sky and Early Universe Surveyor (THESEUS) is a space mission concept currently under Phase A study by ESA as candidate M5 mission, aiming at exploiting Gamma-Ray Bursts for investigating the early Universe and at providing a substantial advancement of multi-messenger and time-domain astrophysics. Through an unprecedented combination of X-/gamma-rays monitors, an on-board IR telescope and automated fast slewing capabilities, THESEUS will be a wonderful machine for the detection, characterization and redshift measurement of any kind of GRBs and many classes of X-ray transients. In addition to the full exploitation of high-redshift GRBs for cosmology (pop-III stars, cosmic re-ionization, SFR and metallicity evolution up to the “cosmic dawn”), THESEUS will allow the identification and study of the electromagnetic counterparts to sources of gravitational waves which will be routinely detected in the late ‘20s / early ‘30s by next generation facilities like aLIGO/aVirgo, LISA, KAGRA, and Einstein Telescope (ET), as well as of most classes of transient sources, thus providing an ideal synergy with the large e.m. facilities of the near future like LSST, ELT, TMT, SKA, CTA, ATHENA.

Is this abstract from experiment?

No

Internet talk

Yes

Name of experiment and experimental site

THESEUS space mission project (<https://www.isdc.unige.ch/theseus/>)

Is the speaker for that presentation defined?

Yes

Details

Dr. Lorenzo Amati, Director of Research (full professor), INAF - OAS Bologna, ITALY, <https://www.oas.inaf.it/>

Primary author: Dr AMATI, Lorenzo (INAF - OAS Bologna)

Presenter: Dr AMATI, Lorenzo (INAF - OAS Bologna)

Session Classification: Workshop on Astro-Cosmo-Gravity
