

Electroweak precision pseudo-observables at the e^+e^- Z-resonance region

Wednesday 29 July 2020 15:30 (30 minutes)

Phenomenologically relevant electroweak precision pseudo-observables related to the Z-boson physics are discussed in the context of strong experimental demands of future e^+e^- colliders.

The recent completion of two-loop Z-boson results is summarized and a prospect for the 3-loop SM calculation of the Z-boson decay pseudo-observables is given.
