

Searches for additional Higgs bosons in the ATLAS detector

Friday 31 July 2020 09:48 (18 minutes)

Since the discovery of the Higgs boson with the mass of about 125 GeV much effort has been spent looking for further scalars, which are motivated in many scenarios. Here we report on searches for new neutral heavy Higgs bosons decaying to pairs of third generation fermions: tau leptons or b quarks. These searches are based on full Run 2 data of the ATLAS experiment at the LHC.
