ICHEP 2020

MEASUREMENTS OF $t\bar{t}H$ AND tH ASSOCIATED PRODUCTION AT CMS

[sergio.sánchez.cruz@cern.ch](mailto:sergio.sanchez.cruz@cern.ch)

INTRODUCTION (I)

- One of the only direct probes of the top-Higgs interaction
- Allows to measure the strength of the Yukawa coupling, CP violation
- $t\bar{t}H$ production is a challenging process to study
 - $\sigma \approx 0.5 \text{ pb}$
- Rich topologies due to the different Higgs and top decay modes

- tH production is even rarer, $\sigma \approx 74 \text{ fb}$
- Sensitive to y_t and g_W couplings
- Interference between y_t and g_W diagrams
- ITC ($\kappa_t / \kappa_W = -1$) enhances cross section by ≈ 10
- ITC has no effect on $t\bar{t}H$ cross section

ANALYSIS STRATEGY

- ▶ Different channels to search for these processes
- ▶ $t\bar{t}H$ observation when combining all channels
(PRL 120, 231801 (2018))

$b\bar{b}$ decay modes ([HIG-18-030](#))

- ▶ Most of the branching ratio, but large backgrounds

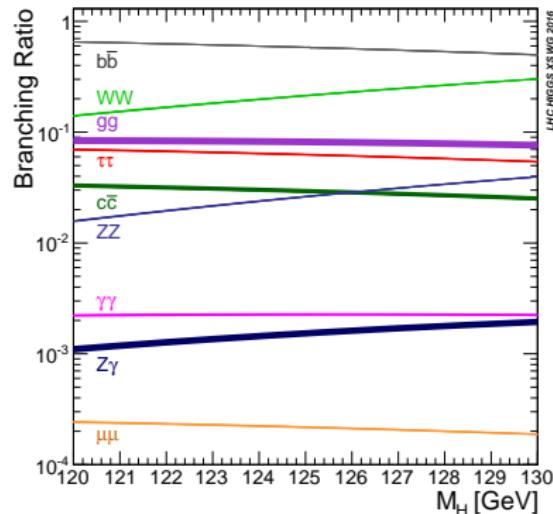

$\gamma\gamma$ decay mode ([2003.10866](#))

- ▶ More $H \rightarrow \gamma\gamma$ in [H. Mei's talk](#)
- ▶ Low background, but low branching ratio
- ▶ Allows to reconstruct the Higgs system

WW , ZZ and $\tau\tau$ decay modes (multilepton, [HIG-19-008](#))

- ▶ Moderate background, but significant branching ratio

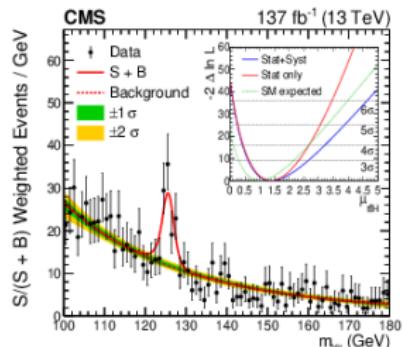

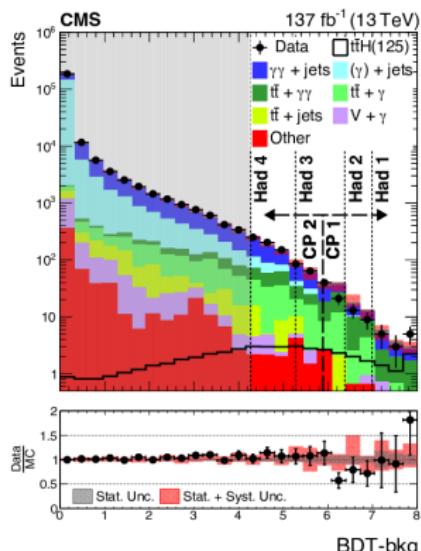

- ▶ Showing Run 2 legacy results
- ▶ Obtained analyzing 137 fb^{-1} of data

DIPHOTON SEARCH

- Events with two photons and targeting hadronic or leptonic top quark decays
- Main backgrounds from $t\bar{t} + \gamma\gamma$
- Usage of BDTs to reject backgrounds
- Signal \Rightarrow Gaussian + CB function
- Background \Rightarrow discrete profiling method

- Signal strength of $1.38^{+0.36}_{-0.29}$, compatible with SM
- Observed significance of 6.6σ wrt no signal hypothesis
- CP studies on this channel in [S. Kyriacou's talk](#)

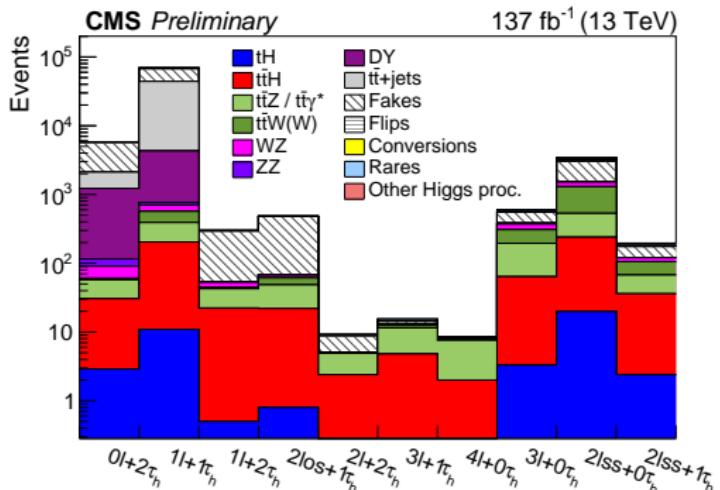

MULTILEPTON SEARCH

Signal regions

- ▶ 10 disjoint categories according to lepton (e or μ) and τ_h multiplicity
- ▶ Different background composition in each category
- ▶ Lepton charge consistent with the expected final state
- ▶ Jet multiplicity according to the $t\bar{t}H$ final state
 - ▶ $2lss + 0\tau_h$, $2lss + 1\tau_h$ and $3l + 0\tau_h$ enlarged to accept tH events
 - ▶ Allowing events with one light (forward) jet and one b tag

Control regions

- ▶ Control regions with 3 and 4 leptons and a Z boson candidate used to constrain $t\bar{t}Z$ background

BACKGROUND DISCRIMINATION

- ▶ Signal regions are mostly dominated by background
- ▶ MVA discriminators are used to separate signals from backgrounds
- ▶ **Input variables:**
 - ▶ 3-momenta of jets, leptons and τ_h
 - ▶ Invariant masses, angular distances, object multiplicities
 - ▶ Taggers to identify decay products of top quarks and H

$2lss + 0\tau_h$, $2lss + 1\tau_h$, $3l + 0\tau_h$ regions

- ▶ Using multiclass DNNs to discriminate $t\bar{t}H$, tH and backgrounds
- ▶ Categories built based on DNN and event topology (next slide)

Rest of the regions

- ▶ No sensitivity expected for $tH \Rightarrow$ using BDT discriminating $t\bar{t}H$ against backgrounds
- ▶ Classifying according to the BDT score

BACKGROUND DISCRIMINATION

- ▶ Signal regions are mostly dominated by background
- ▶ MVA discriminators are used to separate signals from backgrounds
- ▶ Input variables:
 - ▶ 3-momenta of jets, leptons and τ_h
 - ▶ Invariant masses, angular distances, object multiplicities
 - ▶ Taggers to identify decay products of top quarks and H

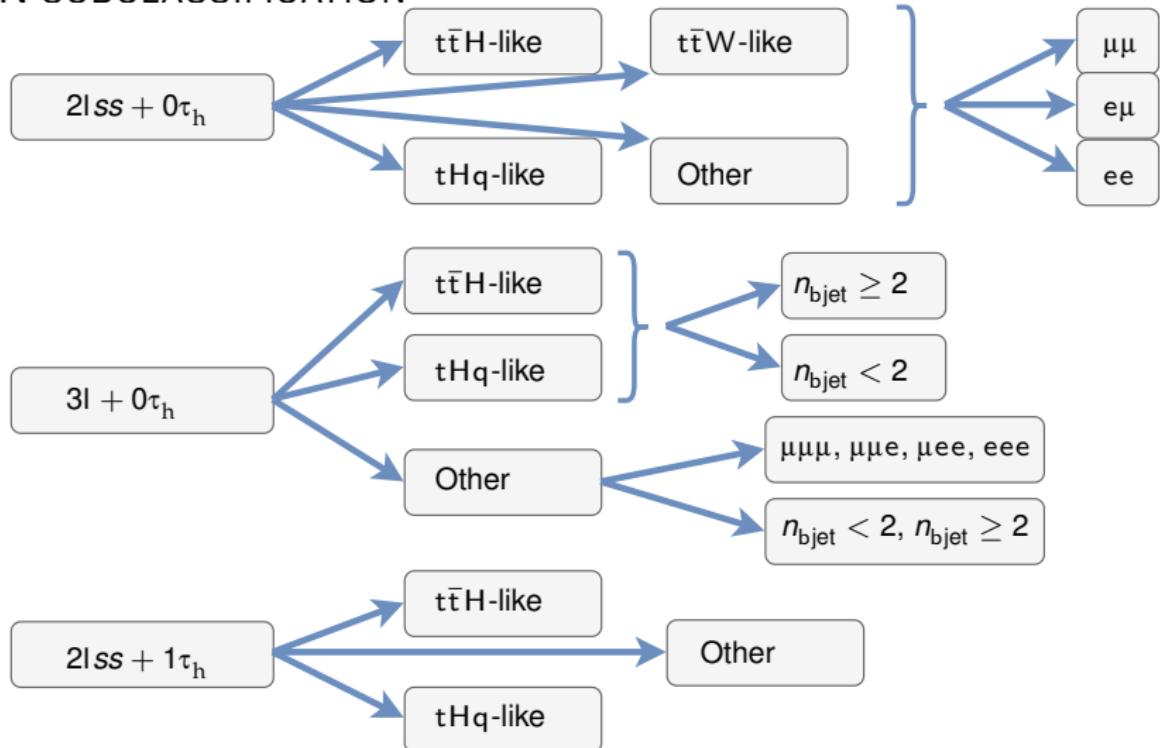

$2lss + 0\tau_h$, $2lss + 1\tau_h$, $3l + 0\tau_h$ regions

- ▶ Using multiclass DNNs to discriminate $t\bar{t}H$, tH and backgrounds
- ▶ Categories built based on DNN and event topology (next slide)

Rest of the regions

- ▶ No sensitivity expected for $tH \Rightarrow$ using BDT discriminating $t\bar{t}H$ against backgrounds
- ▶ Classifying according to the BDT score

DNN SUBCLASSIFICATION

- ▶ DNN and event topology-based classification
- ▶ Further classification is performed based on the score of the most probable process

BACKGROUNDS

Estimation of backgrounds is key in this analysis

Reducible backgrounds due to

- ▶ Non-prompt leptons and misidentified τ_h
 - ▶ Electron charge flips
 - ▶ Photon conversions
- } Estimated with data-driven methods
} Estimated with simulations

Irreducible backgrounds due to

- ▶ $t\bar{t}Z$, $t\bar{t}W$
- ▶ Less importantly, WZ , ZZ , rares (tZq , $t\bar{t}t\bar{t}$, ...)
- ▶ $t\bar{t}$ and DY events are also irreducible in the $1l + 1\tau_h$ and $0l + 2\tau_h$ categories
- ▶ Estimated using state-of-the-art MC simulations and normalized to the more precise theory calculations

Estimation of backgrounds is key in this analysis

Reducible backgrounds due to

Irreducible backgrounds due to

- ▶ $t\bar{t}Z$, $t\bar{t}W$
- ▶ Less importantly, WZ , ZZ , rares (tZq , $t\bar{t}t\bar{t}$, ...)
- ▶ $t\bar{t}$ and DY events are also irreducible in the $1l + 1\tau_h$ and $0l + 2\tau_h$ categories
- ▶ Estimated using state-of-the-art MC simulations and normalized to the more precise theory calculations

REDUCIBLE BACKGROUNDS

Non-prompt leptons

- ▶ Largely suppressed with MVA techniques in the lepton identification
- ▶ A tiny portion leak into signal regions
- ▶ Using the tight-to-loose method
 - ▶ Transfer factor in multijet events
- ▶ Check the method in $t\bar{t}$ simulations
- ▶ Similar procedure followed for misidentified τ_h

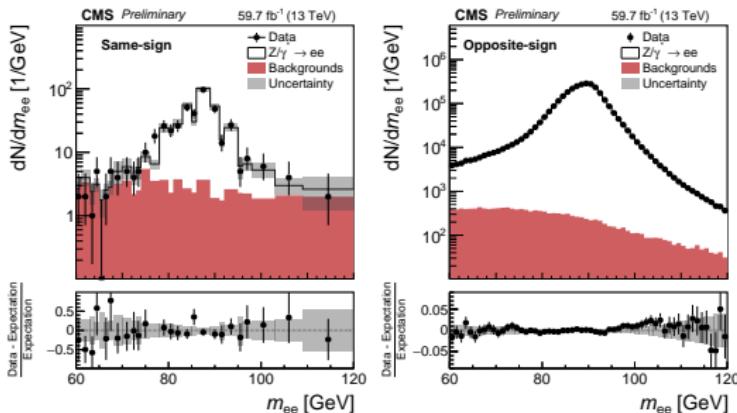

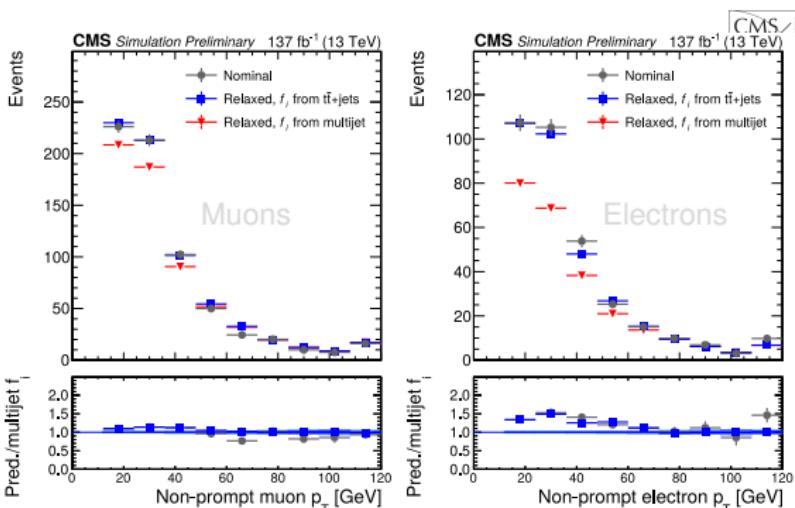

Electron charge flips

- ▶ Small fraction of events measured with opposite-charge sign
- ▶ Estimated from a opposite-sign sideband

REDUCIBLE BACKGROUNDS

Non-prompt leptons

- Largely suppressed with MVA techniques in the lepton identification
- A tiny portion leak into signal regions
- Using the tight-to-loose method
 - Transfer factor in multijet events
- Check the method in $t\bar{t}$ simulations
- Similar procedure followed for misidentified τ_h

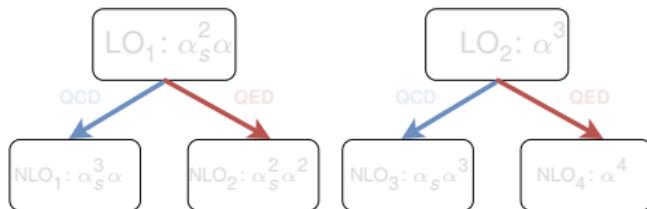

Electron charge flips

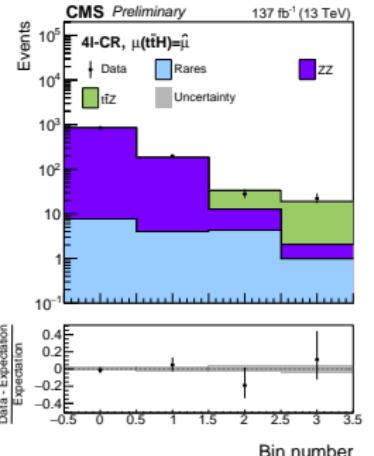

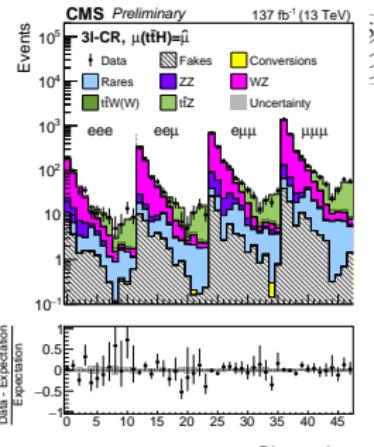

- Small fraction of events measured with opposite-charge sign
- Estimated from a opposite-sign sideband

IRREDUCIBLE BACKGROUNDS

- ▶ $t\bar{t}Z$ and $t\bar{t}W$ normalization are determined in the signal extraction fit
 - ▶ No assumption made on the total cross section
- ▶ Dedicated control region for $t\bar{t}Z$
 - ▶ 3l with a Z boson candidate
 - ▶ 4l with a Z boson candidate
- ▶ Dedicated $t\bar{t}W$ category in the $2lss + 0\tau_h$, built with the DNN score
- ▶ $t\bar{t}Z$ and $t\bar{t}H$ simulated with NLO QCD
- ▶ tH simulated at LO
- ▶ $t\bar{t}W$ simulated at NLO QCD, including α^3 and $\alpha^3\alpha_s$ corrections

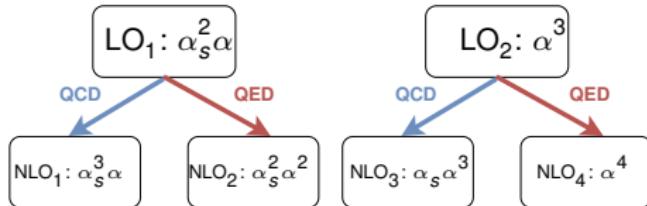

Using the most state-of-the-art generators

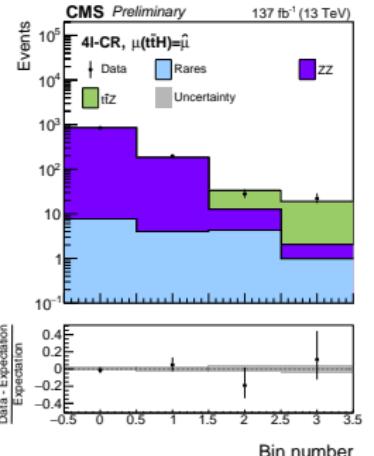

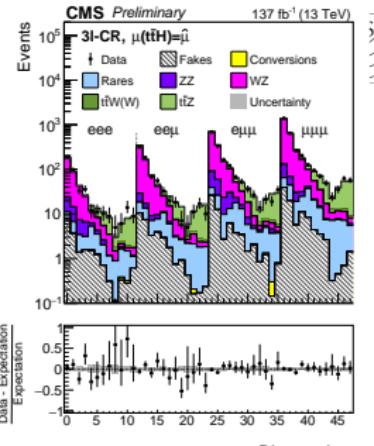

IRREDUCIBLE BACKGROUNDS

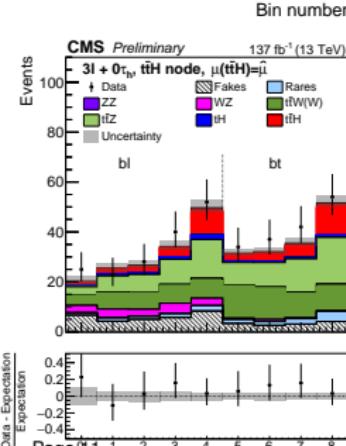

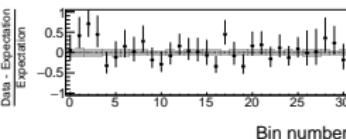

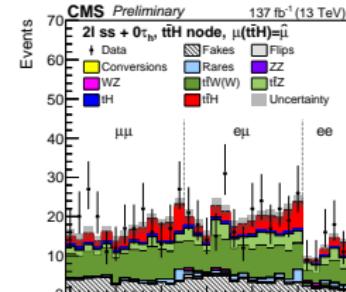

- ▶ $t\bar{t}Z$ and $t\bar{t}W$ normalization are determined in the signal extraction fit
 - ▶ No assumption made on the total cross section
- ▶ Dedicated control region for $t\bar{t}Z$
 - ▶ 3l with a Z boson candidate
 - ▶ 4l with a Z boson candidate
- ▶ Dedicated $t\bar{t}W$ category in the $2lss + 0\tau_h$, built with the DNN score
- ▶ $t\bar{t}Z$ and $t\bar{t}H$ simulated with NLO QCD
- ▶ tH simulated at LO
- ▶ $t\bar{t}W$ simulated at NLO QCD, including α^3 and $\alpha^3\alpha_s$ corrections

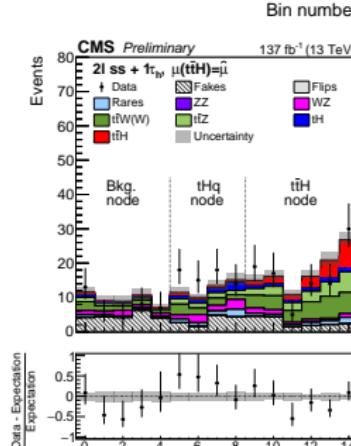

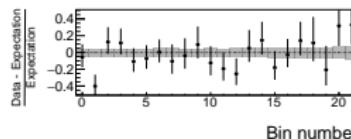

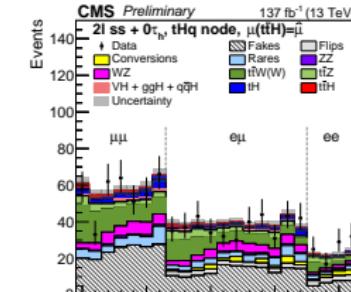

Using the most state-of-the-art generators

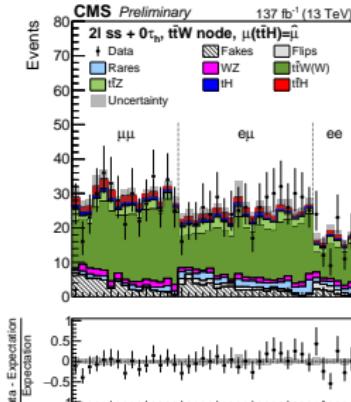

RESULTS

Page 0/11

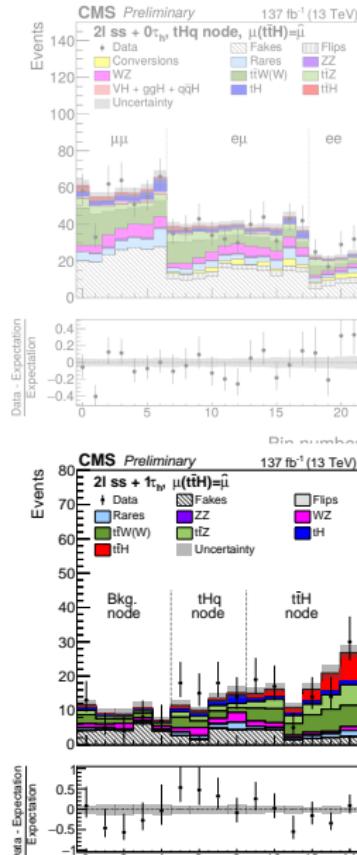

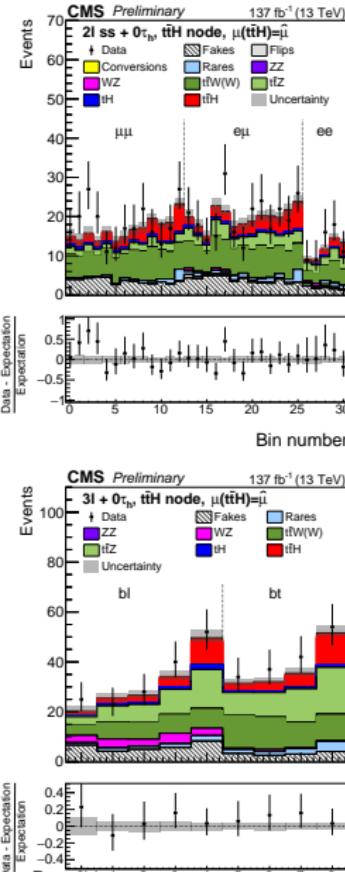

- ▶ Observed events in some signal categories
- ▶ Good agreement of data with the model
 - ▶ Other regions in back-up
- ▶ Clear presence of $t\bar{t}H$ signal in the regions
- ▶ Very pure selection of $t\bar{t}W$ background

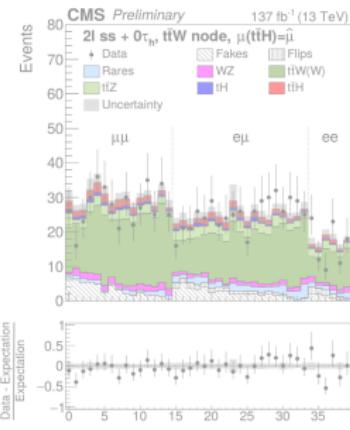

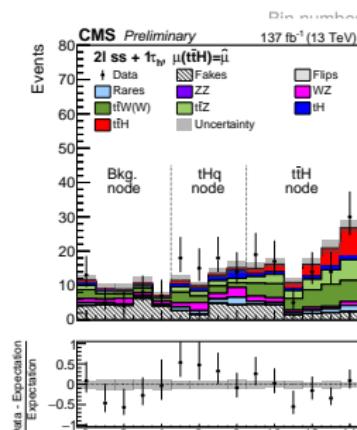

Page 0/11

Page 0/11

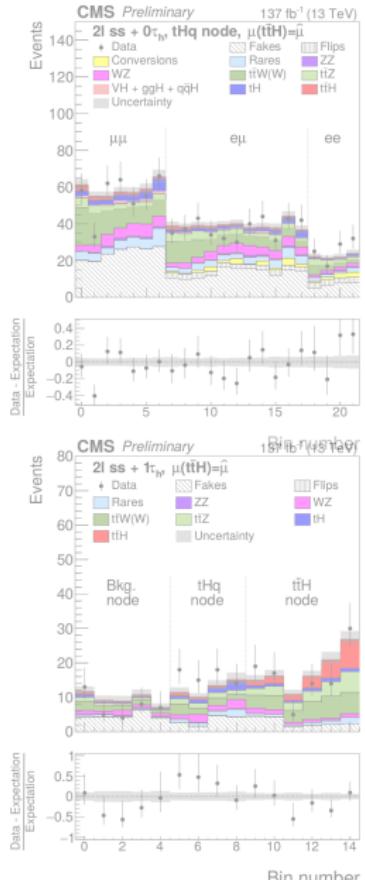

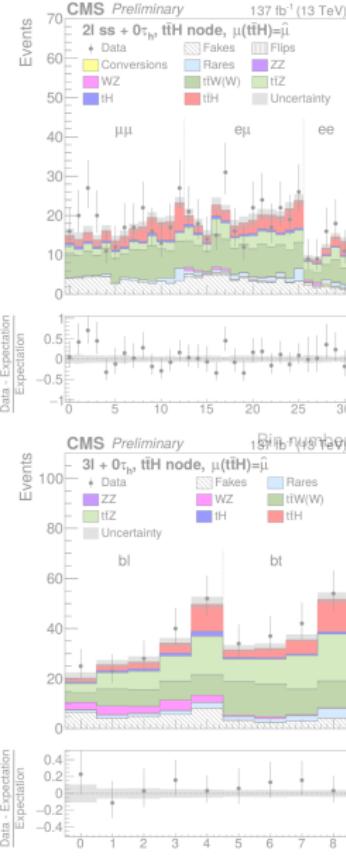

RESULTS

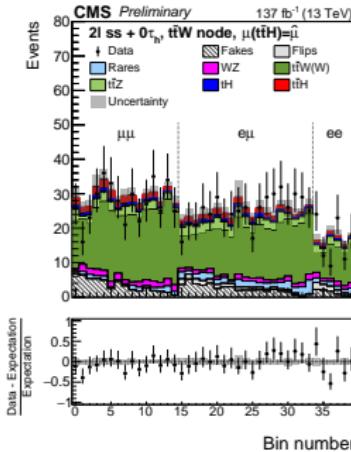

- ▶ Observed events in some signal categories
- ▶ Good agreement of data with the model
 - ▶ Other regions in back-up
- ▶ Clear presence of $t\bar{t}H$ signal in the regions
- ▶ Very pure selection of $t\bar{t}W$ background

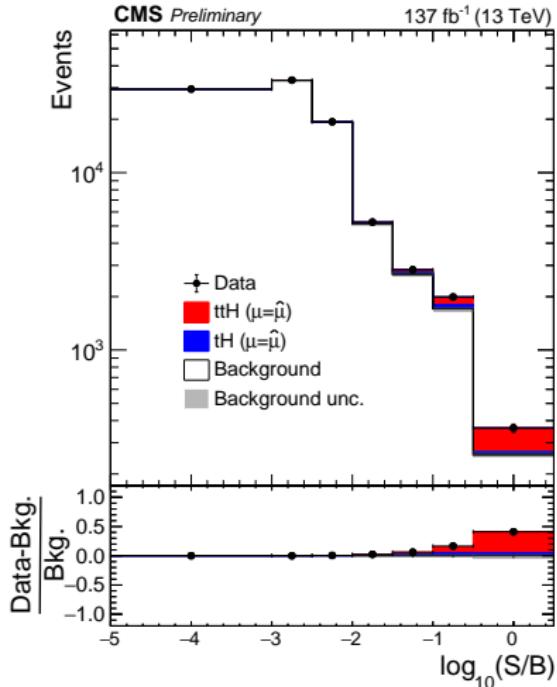

RESULTS

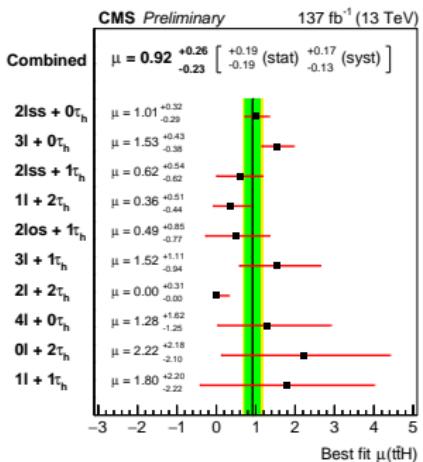

- ▶ Observed events in some signal categories
- ▶ Good agreement of data with the model
 - ▶ Other regions in back-up
- ▶ Clear presence of $t\bar{t}H$ signal in the regions
- ▶ Very pure selection of $t\bar{t}W$ background

SIGNAL EXTRACTION

- Signals are extracted fitting data in all the categories
- Sensitivity to $t\bar{t}H$ production of 5.2σ
- Sensitivity to tH production of 0.3σ

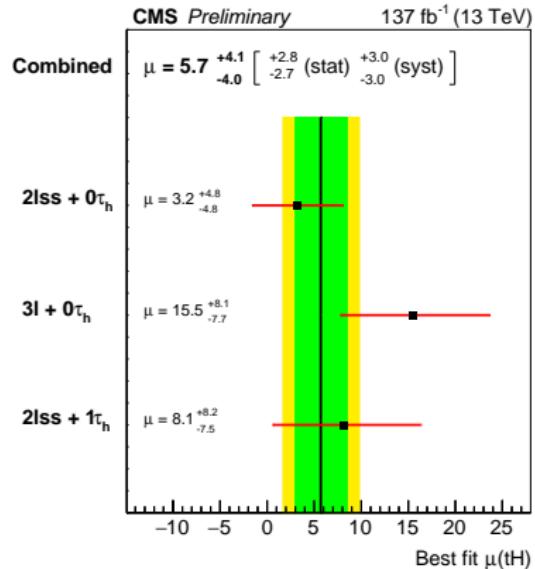

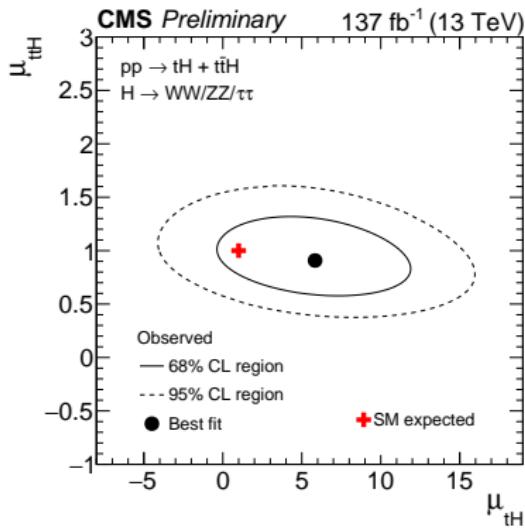

- Observed signal strengths consistent with SM
- $t\bar{t}W$ production above expectation

Process	Signal strength
$t\bar{t}H$	$0.92^{+0.26}_{-0.23}$
tH	$5.7^{+4.1}_{-4.0}$
$t\bar{t}Z$	1.03 ± 0.14
$t\bar{t}W$	1.43 ± 0.21

SIGNAL EXTRACTION (II)

- Combined extraction of $t\bar{t}H$ and tH :

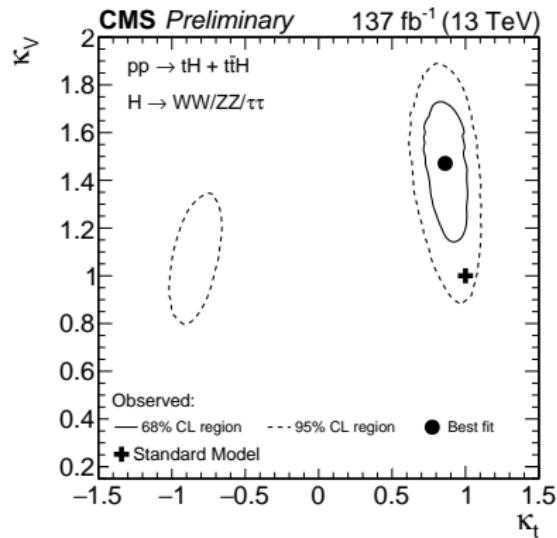

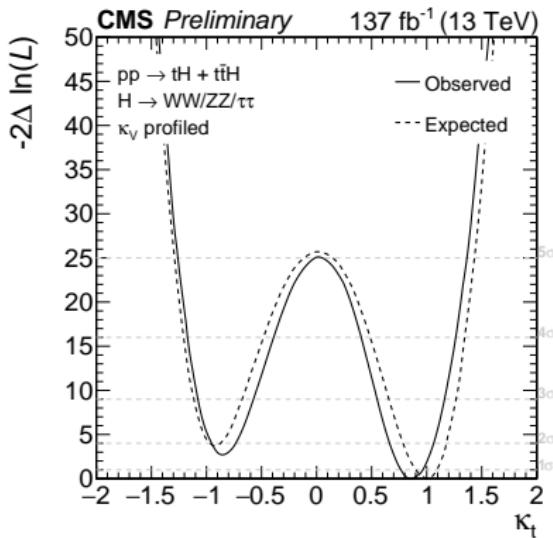

Observed significances

- Observed significance for $t\bar{t}H$ production: 4.7σ
- Observed significance for tH production: 1.4σ

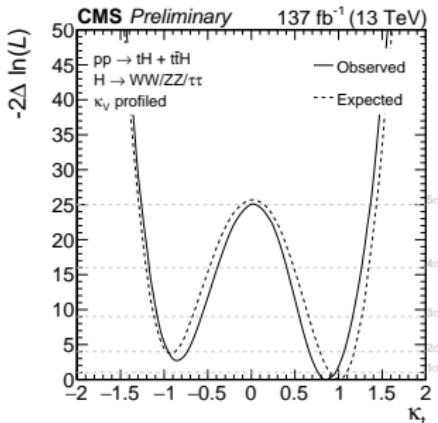

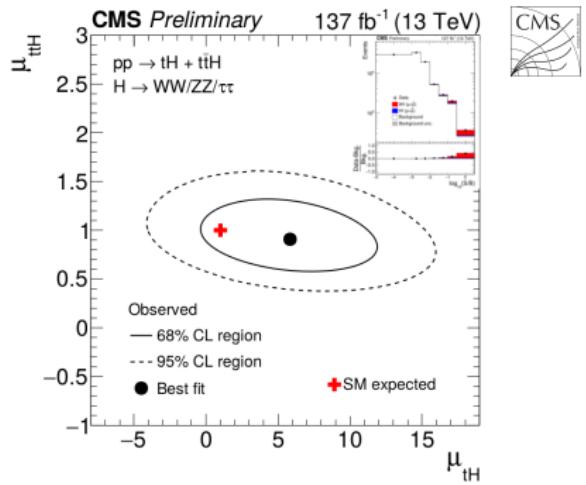

κ FRAMEWORK RESULTS

- ▶ Interpretation of yields in terms of κ_t and κ_V
 - ▶ Effect on tH kinematics and Higgs branching ratios taken into account
- ▶ Likelihood scans as a function of κ_t and κ_V
- ▶ Best fit consistent with the SM expectation
- ▶ κ_t constrained to be within $-0.9 < \kappa_t < -0.7$ or $0.7 < \kappa_t < 1.1$ at 95% C.L.

SUMMARY

- ▶ $t\bar{t}H$ and tH production have been measured in the multilepton and diphoton channel
- ▶ Using the complete run 2 dataset collected by CMS, corresponding to 137 fb^{-1}
- ▶ Observation of $t\bar{t}H$ production in the diphoton channel
- ▶ More than 5σ sensitivity to $t\bar{t}H$ production in multilepton
- ▶ $t\bar{t}H$ signal strength measured to be $0.92^{+0.26}_{-0.23}$
- ▶ Observed (expected) significance of 4.7 (5.2) σ
- ▶ tH signal strength measured to be $5.7^{+4.1}_{-4.0}$
- ▶ Observed (expected) significance of 1.4 (0.3) σ
- ▶ Results interpreted in terms of Higgs coupling modifiers
- ▶ κ_t constrained to be within $-0.9 < \kappa_t < -0.7$ or $0.7 < \kappa_t < 1.1$ at 95% C.L.

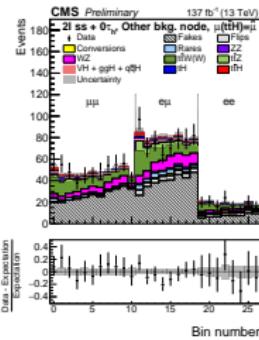

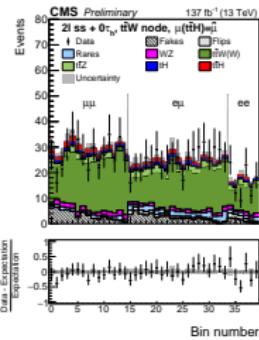

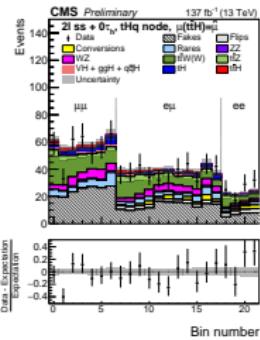

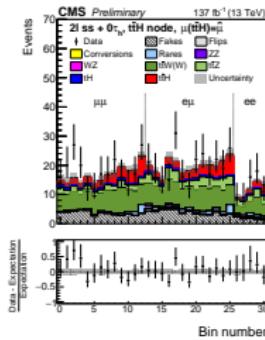

Back-up

RESULTS

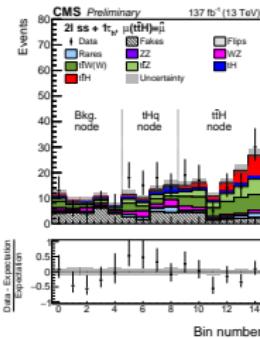

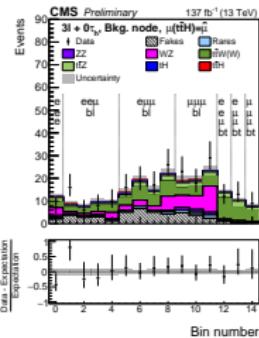

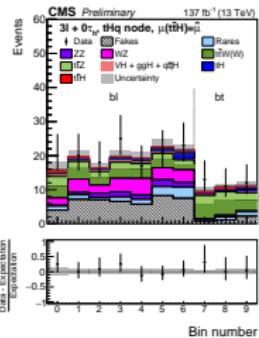

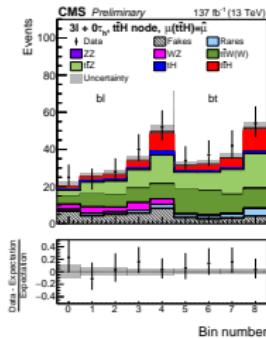

$2lss + 0\tau_h$

RESULTS

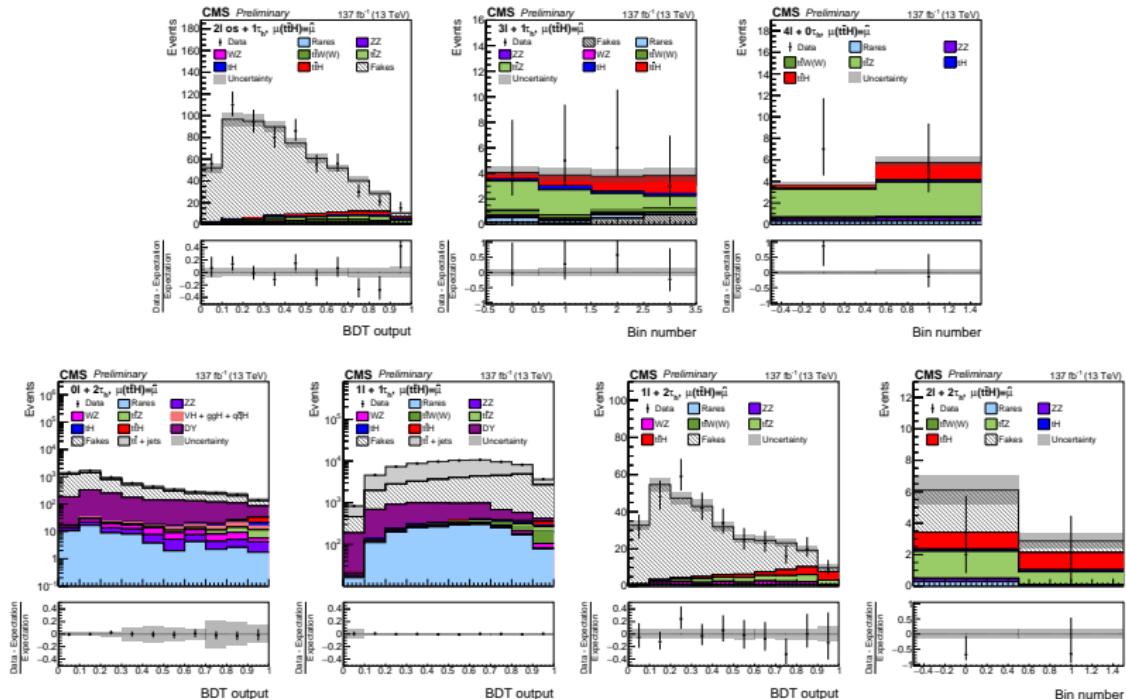

$3l + 0\tau_h$ and $2lss + 1\tau_h$

RESULTS

Other categories

- ▶ Signals, $t\bar{t}Z$ and $t\bar{t}W$ normalization are freely floating
 - ▶ No assumption on total cross section
- ▶ Modeling of irreducible processes follows the most accurate calculations available

$t\bar{t}H$ and $t\bar{t}Z$ production

- ▶ Generated at NLO QCD with MADGRAPH5_aMC@NLO
- ▶ Normalized NLO QCD+EWK ([arXiv:1610.07922](#))

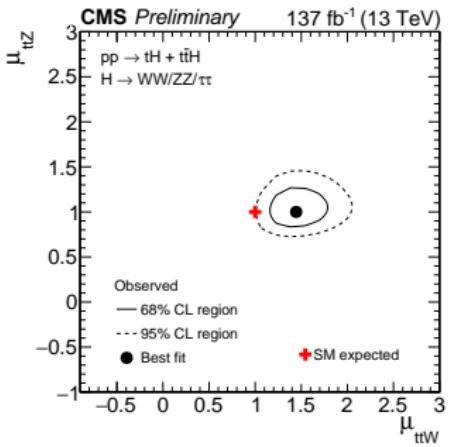

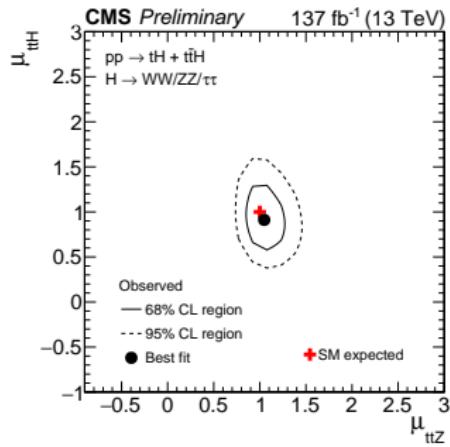

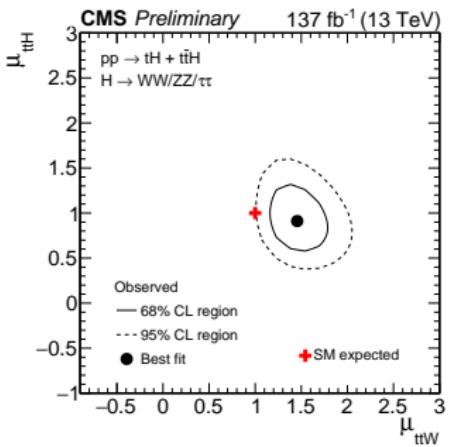

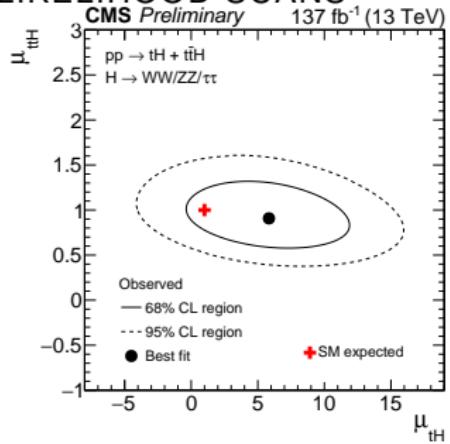

tHq and tHW

- ▶ Generated at LO with MADGRAPH5_aMC@NLO
- ▶ Normalized at NLO QCD ([arXiv:1610.07922](#))

$t\bar{t}W$ production

- ▶ Generated at NLO QCD with MADGRAPH5_aMC@NLO
 - ▶ Normalized to NLO QCD + EWK ([arXiv:1610.07922](#))
- ▶ α^3 and $\alpha_s \alpha^3$ corrections are added on top ([arXiv:2004.09552](#))

Selection step	$2\ell ss + 0\tau_h$	$2\ell ss + 1\tau_h$
Targeted $t\bar{t}H$ decay	$t \rightarrow b\ell\nu, t \rightarrow bqq'$ with $H \rightarrow WW \rightarrow \ell\nu qq'$	$t \rightarrow b\ell\nu, t \rightarrow bqq'$ with $H \rightarrow \tau\tau \rightarrow \ell\nu\nu\tau_h\nu$
Targeted tH decays	$t \rightarrow b\ell\nu,$ $H \rightarrow WW \rightarrow \ell\nu qq$	$t \rightarrow b\ell\nu,$ $H \rightarrow \tau\tau \rightarrow \ell\tau_h + \nu's$
Trigger	Single- and double-lepton triggers	
Lepton p_T	$p_T > 25 / 15 \text{ GeV}$	$p_T > 25 / 15 \text{ GeV (e) or } 10 \text{ GeV (\mu)}$
Lepton η	$ \eta < 2.5 \text{ (e) or } 2.4 \text{ (\mu)}$	
$\tau_h p_T$	—	$p_T > 20 \text{ GeV}$
$\tau_h \eta$	—	$ \eta < 2.3$
τ_h identification	—	very-loose
Charge requirements	2 same-sign leptons and charge quality requirements	2 same-sign leptons and charge quality requirements $\sum_{\ell, \tau_h} q = \pm 1$
Multiplicity of central jets	≥ 3 jets	≥ 3 jets
b tagging requirements	≥ 1 tight b-tagged jet or ≥ 2 loose b-tagged jets	
Missing transverse momentum	$L_D > 30 \text{ GeV}^\dagger$	
Dilepton invariant mass	$ m_{\ell\ell} - m_Z > 10 \text{ GeV}^\ddagger$ and $m_{\ell\ell} > 12 \text{ GeV}$	

Selection step	$3\ell + 0\tau_h$	$3\ell + 1\tau_h$
Targeted $t\bar{t}H$ decays	$t \rightarrow b\ell\nu, t \rightarrow b\ell\nu$ with $H \rightarrow WW \rightarrow \ell\nu qq'$ $t \rightarrow b\ell\nu, t \rightarrow bq\bar{q}'$ with $H \rightarrow WW \rightarrow \ell\nu\ell\nu$ $t \rightarrow b\ell\nu, t \rightarrow bq\bar{q}'$ with $H \rightarrow ZZ \rightarrow \ell\ell qq' \text{ or } \ell\ell\nu\nu$	$t \rightarrow b\ell\nu, t \rightarrow b\ell\nu$ with $H \rightarrow \tau\tau \rightarrow \ell\nu\nu\tau_h\nu$
Targeted tH decays	$t \rightarrow b\ell\nu, H \rightarrow WW \rightarrow \ell\nu\ell\nu$	—
Trigger	Single-, double- and triple-lepton triggers	
Lepton p_T	$p_T > 25 / 15 / 10 \text{ GeV}$	
Lepton η	$ \eta < 2.5 (\text{e}) \text{ or } 2.4 (\mu)$	
$\tau_h p_T$	—	$p_T > 20 \text{ GeV}$
$\tau_h \eta$	—	$ \eta < 2.3$
τ_h identification	—	very-loose
Charge requirements	$\sum_\ell q = \pm 1$	$\sum_{\ell, \tau_h} q = 0$
Multiplicity of central jets	≥ 2 jets	
b tagging requirements	≥ 1 tight b-tagged jet or ≥ 2 loose b-tagged jets	
Missing transverse momentum	$L_D > 0 / 30 / 45 \text{ GeV}^\ddagger$	
Dilepton invariant mass	$m_{\ell\ell} > 12 \text{ GeV}$ and $ m_{\ell\ell} - m_Z > 10 \text{ GeV}^\S$	
Four-lepton invariant mass	$m_{4\ell} > 140 \text{ GeV}^\P$	—

Selection step	$0\ell + 2\tau_h$	$1\ell + 1\tau_h$
Targeted $t\bar{t}H$ decays	$t \rightarrow bqq', t \rightarrow bqq' \text{ with}$ $H \rightarrow \tau\tau \rightarrow \tau_h\nu\tau_h\nu$	$t \rightarrow bqq', t \rightarrow bqq' \text{ with}$ $H \rightarrow \tau\tau \rightarrow \ell\nu\nu\tau_h\nu$
Trigger	Double- τ_h trigger	Single-lepton and lepton+ τ_h triggers
Lepton p_T	—	$p_T > 30$ (e) or 25 GeV (μ)
Lepton η	—	$ \eta < 2.1$
$\tau_h p_T$	$p_T > 40$ GeV	$p_T > 30$ GeV
$\tau_h \eta$		$ \eta < 2.1$
τ_h identification	loose	medium
Charge requirements	$\sum_{\tau_h} q = 0$	$\sum_{\ell, \tau_h} q = 0$
Multiplicity of central jets		≥ 4 jets
b tagging requirements	≥ 1 tight b-tagged jet or ≥ 2 loose b-tagged jets	
Dilepton invariant mass		$m_{\ell\ell} > 12$ GeV

Selection step	$1\ell + 2\tau_h$	$2\ell + 2\tau_h$
Targeted $t\bar{t}H$ decays	$t \rightarrow b\ell\nu, t \rightarrow bqq'$ with $H \rightarrow \tau^+\tau^- \rightarrow \tau_h\nu\tau_h\nu$	$t \rightarrow b\ell\nu, t \rightarrow b\ell\nu$ with $H \rightarrow \tau^+\tau^- \rightarrow \tau_h\nu\tau_h\nu$
Trigger	Single-lepton and lepton+ τ_h triggers	Single- and double-lepton triggers
Lepton p_T	$p_T > 30$ (e) or 25 GeV (μ)	$p_T > 25 / 10 (15)$ GeV (e) $ \eta < 2.1$
Lepton η		$ \eta < 2.5$ (e) or 2.4 (μ)
$\tau_h p_T$	$p_T > 30 / 20$ GeV	$p_T > 20$ GeV
$\tau_h \eta$	$ \eta < 2.1$	$ \eta < 2.3$
τ_h identification	medium	medium
Charge requirements	$\sum_{\ell, \tau_h} q = \pm 1$	$\sum_{\ell, \tau_h} q = 0$
Multiplicity of central jets	≥ 3 jets	≥ 2 jets
b tagging requirements	≥ 1 tight b-tagged jet or ≥ 2 loose b-tagged jets	
Missing transverse momentum	—	$L_D > 0 / 30 / 45$ GeV [†]
Dilepton invariant mass		$m_{\ell\ell} > 12$ GeV

Selection step	$2\ell\text{os} + 1\tau_h$	$4\ell + 0\tau_h$
Targeted $t\bar{t}H$ decays	$t \rightarrow b\ell\nu, t \rightarrow bqq'$ with $H \rightarrow \tau^+\tau^- \rightarrow \ell\nu\nu\tau_h\nu$	$t \rightarrow b\ell\nu, t \rightarrow b\ell\nu$ with $H \rightarrow WW \rightarrow \ell\nu\ell\nu$ $t \rightarrow b\ell\nu, t \rightarrow b\ell\nu$ with $H \rightarrow ZZ \rightarrow \ell\ell qq'$ or $\ell\ell\nu\nu$
Trigger	Single- and double-lepton triggers	Single-, double- and triple-lepton triggers
Lepton p_T	$p_T > 25 / 15 \text{ GeV (e) or } 10 \text{ GeV (\mu)}$	$p_T > 25 / 15 / 15 / 10 \text{ GeV}$
