

Higgs measurements at the FCC-ee

Wednesday 29 July 2020 16:06 (18 minutes)

Precision measurements and searches for new phenomena in the Higgs sector are among the most important goals in particle physics. The large circular e+e- collider FCC-ee will provide collisions up to an energy of 365 GeV, with extremely high luminosities. These collisions will allow the ultimate precision on studies of the Higgs boson couplings, mass, total width and CP parameters, as well as searches for exotic and invisible decays.
