

# Radio Detection of inclined showers at the Pierre Auger Observatory

Sijbrand de Jong

On behalf of the Auger Collaboration\*

\*Many thanks to all Auger members,  
in particular to all colleagues in AERA

- Take home   Radio Detection of Cosmic Rays:
- proven technique
  - construct at very large scale  
( $3000 \text{ km}^2$  !)

# Ultra-High-Energy Cosmic Rays $E > 1 \text{ EeV}$

Particle interactions  
at the highest energy  
ever seen

?

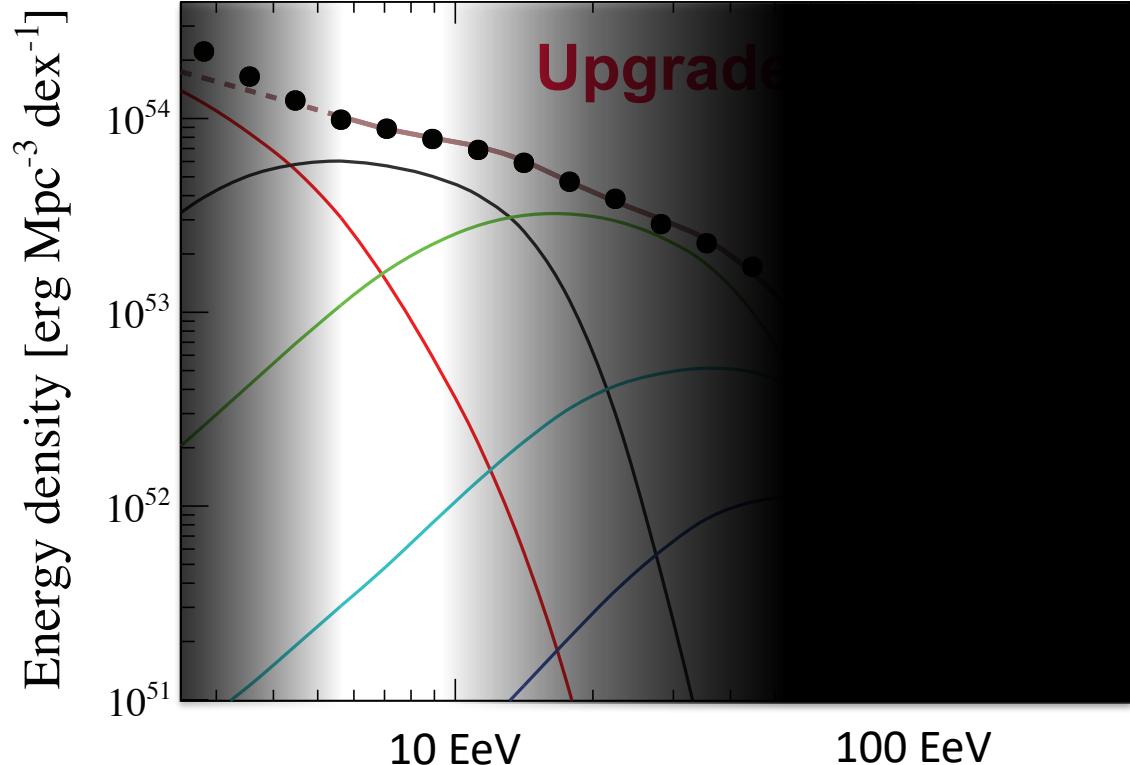

Origin of highest-energy  
particles in the Universe

?

**Particle type is the key !**

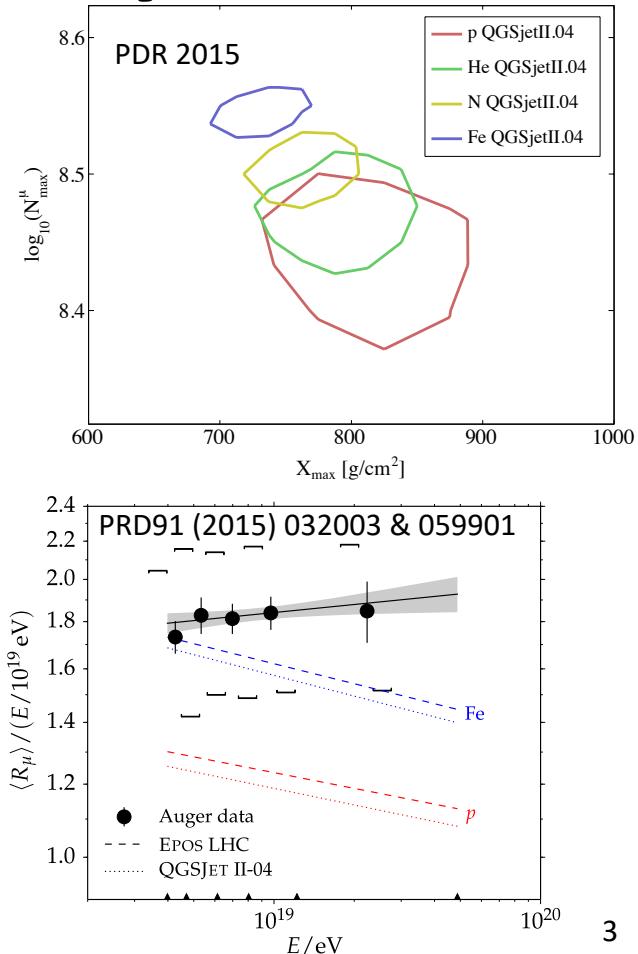

# Pierre Auger Observatory results

Submitted to PRL

# Measure particle type at highest energies

total # e

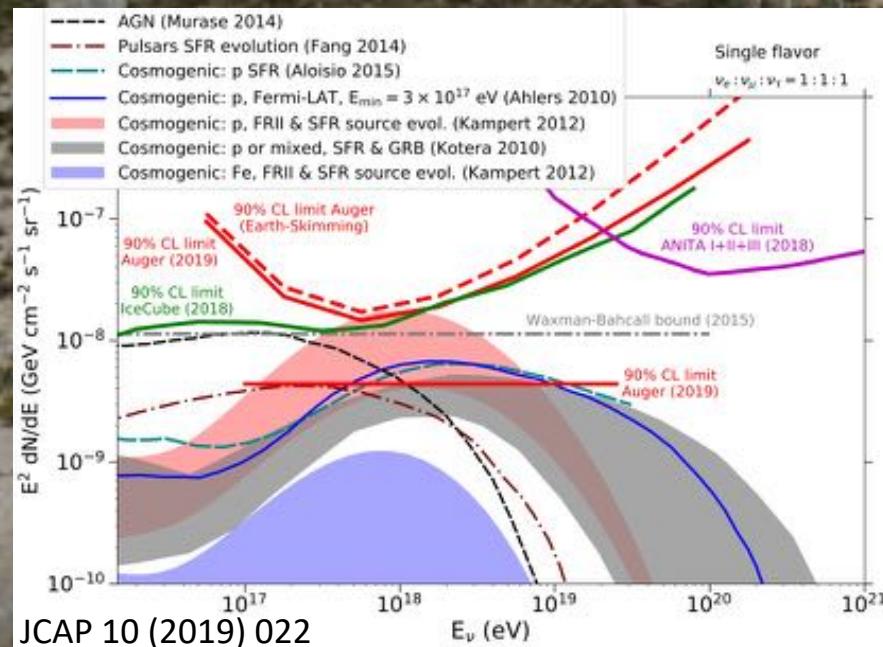

combination gives  
e and  $\mu$  separately

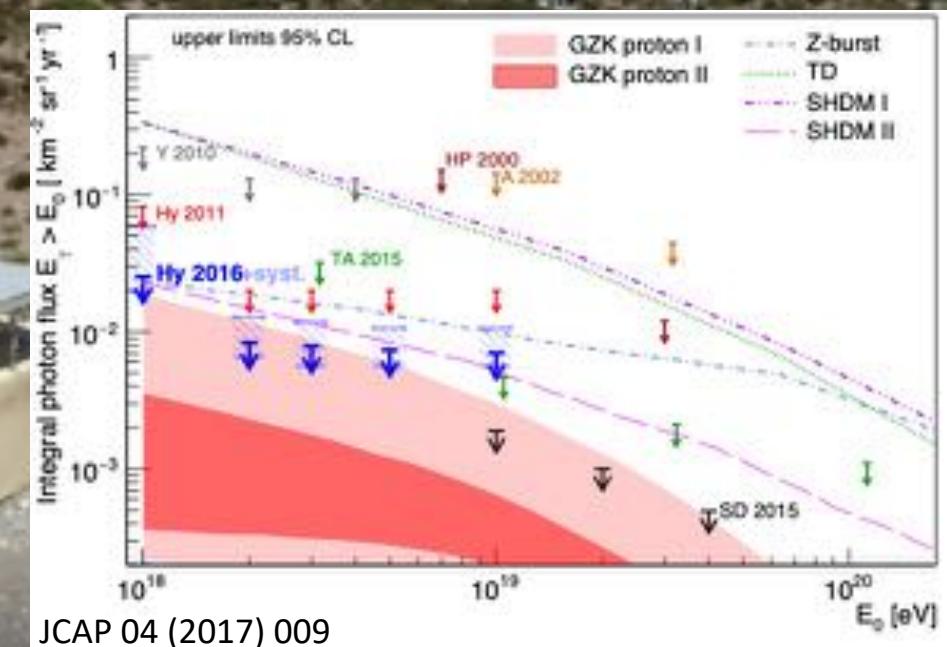

# Auger RD

Looking for ultra-high-energy neutrals in inclined showers

Neutrino: RD signal + many muons

Photon: RD signal + few muons

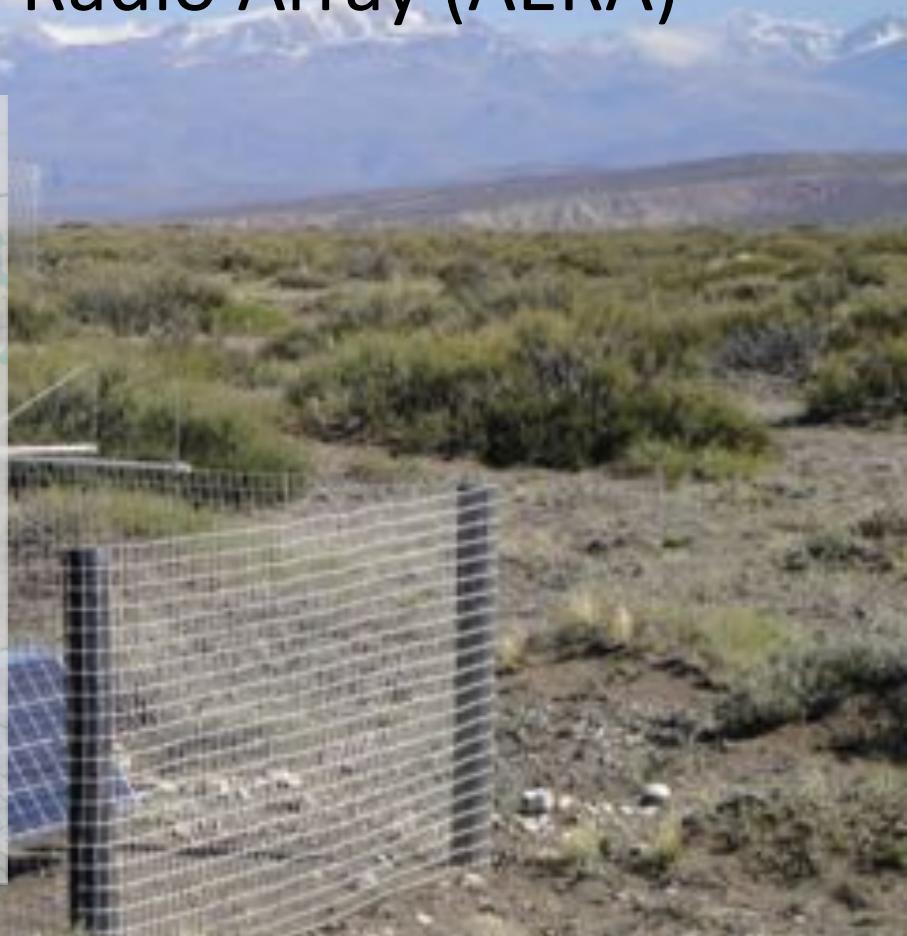

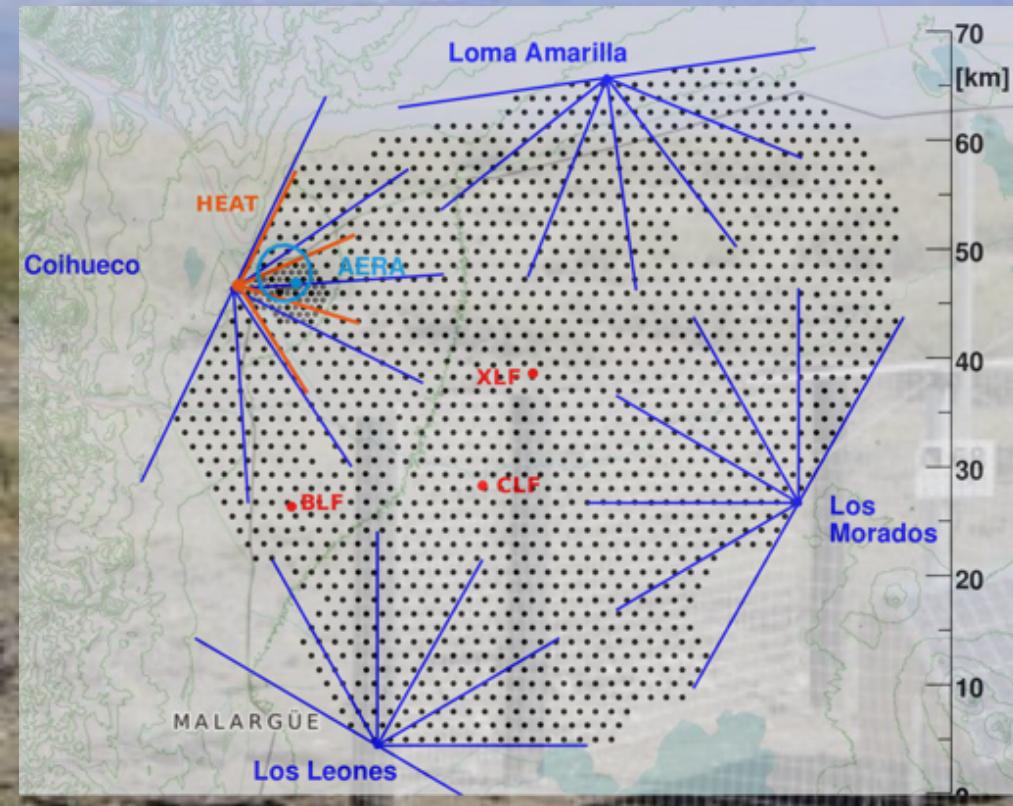

Triggering as slave of SD tank, but investigating using RD in local station trigger

# Auger RD Status

# Auger RD Status

- Mechanical design complete and tested
- Electronics design nearly complete, optimising gain and noise performance on galactic background
- 10 prototypes in the field, 7 in engineering array taking data since 8 months
- Start production end this year
- Deployment in 2021
- Measuring until 2030 (and beyond)
