

Status and Plan of PandaX Experiment

Thursday, 30 July 2020 11:25 (25 minutes)

The PandaX experiment uses liquid xenon as the target material to perform the dark matter direct detection at China Jinping Underground Laboratory. In 2019, the PandaX-II experiment with 580 kg liquid xenon in the sensitive volume finished the data-taking and the total exposure is around 140 ton-day. Currently, the PandaX collaboration is planning for the next generation multi-ton liquid xenon experiment. The immediate next step is a 4-ton scale liquid xenon experiment, PandaX-4T, with which we expect to extend the sensitivity to WIMP search by one order of magnitude as compared to the PandaX-II experiment. In this talk, I will discuss the latest results from the PandaX-II experiment and the progress of the PandaX-4T experiment.

Secondary track (number)

Primary author: ZHOU, Ning (Shanghai Jiao Tong University (CN))

Presenter: ZHOU, Ning (Shanghai Jiao Tong University (CN))

Session Classification: Dark Matter Detection

Track Classification: 09. Dark Matter Detection
