

Rare decays of Λ_b , B_c , and other b-hadrons at LHCb

Thursday, 30 July 2020 08:30 (15 minutes)

Rare b-hadron decays are sensitive probes of New Physics through the study of branching fractions, angular observables, CP asymmetries. Moreover, the LHCb experiment has the opportunity to study the rare decays of heavy b-quark hadrons such as B_c mesons or Λ_b baryons, which cannot be explored at the B factories. Recent results from the LHCb experiment are presented and their interpretation is discussed.
