

Lepton Universality tests using semileptonic b-hadron decays

Wednesday, July 29, 2020 5:31 PM (15 minutes)

In the Standard Model, the three charged leptons are identical copies of each other, aside from differences in mass. Experimental tests of this principle in semileptonic decays of b-hadrons are highly sensitive to New Physics particles which couple differently among the leptonic families. This talk reports the most recent lepton universality tests in semileptonic b->c transitions at LHCb.
