

Recent charm results from Belle

Tuesday 28 July 2020 20:29 (15 minutes)

Using the full data collected with the Belle detector at the KEKB asymmetric-energy e^+e^- collider, we report the first measurement of charm-mixing y_{CP} in D^0 decays to the CP-odd final state $K_S^0\omega$. We present a Dalitz-plot analysis of the three-body decay $D^0 \rightarrow K^-\pi^+\eta$. Along with these, we present other results related to charm physics at Belle.
