

Circular vs linear e+e- colliders, another story of complementarity

Wednesday 29 July 2020 16:50 (20 minutes)

The physics program proposed by circular and linear e+e- colliders at the electroweak and TeV scale exhibits considerable complementarity. This could be exploited on a world-wide scale if both a large circular and a linear infrastructures were available. A possible implementation of such a complementary program is shown.
