

Searches for new physics at high-mass with leptons using the ATLAS detector

Thursday, 30 July 2020 11:15 (15 minutes)

Many theories beyond the Standard Model predict new phenomena, such as Z' , W' bosons or heavy neutrinos, in final states with isolated, high-pt leptons ($e/\mu/\nu$). Searches for new physics with such signatures, produced either resonantly or non-resonantly, are performed using the ATLAS experiment at the LHC. The recent 13 TeV pp results will be reported.
