

Searching for pair production of SUSY particle in leptonic final states at the CMS

Friday, 31 July 2020 10:05 (15 minutes)

The most recent results for searches of pair production of charged and neutral electroweak SUSY particles are presented. The analyses are performed in the final states containing one or more leptons, and presence of a boosted Higgs boson. The results are based on proton-proton collisions recorded at $\sqrt{s} = 13$ TeV with the CMS detector using the full Run 2 dataset of 137 fb⁻¹.
