

Synergies with CS3Mesh4EOSC (CS3Mesh Kick-off)

- Test Suite
 - Maybe CS3Mesh can profit from the ARCHIVER test suite available in Github
 - <https://github.com/cern-it-efp/OCRE-Testsuite>
 - A simple framework using Terraform for resource provisioning; Kubernetes for resource orchestration as a standard way to embark scientific use cases tests
- APIs
 - Would it make sense to define and test together the APIs implementation that will be available in ARCHIVER resulting repository services?
 - ARCHIVER will give strong preference to open, general purpose APIs
 - Testing innovative data workflows from CS3 -> ARCHIVER based on “data temperature”?
