# WHY CHANGE?

FeynRules WorkShop 2010

10

# WHY CHANGE?

FeynRules WorkShop 2010

~~Harder~~

## WHY CHANGE?

- *MG4* is in fortran 77
  - Not Object Oriented
  - predefine memory use
- *MG4* is an *old code* (1994)
  - New implementations are hard

*Time For a new Start*

~~Harder~~

# MG5 and Python

MadGraph Version 4  
UCL UIUC Fermi  
by the MG/ME Development team

Better

# Check List

Leading order matrix element generation	$\leq 8$ FS, $<10000$ diag Max. $W+4$ jet/ $t\bar{t}+3$ jet
BSM, any renormalizable model	Yes
Decay Chains	Max 8 FS, slow
Color structures	Singlet/triplet/octet
Extended color structures (6, 27, $\epsilon^{ijk}$ )	No
Effective theories ( $>4$ -particle vx)	No
Recursion relations for multijet generation	No
NLO real corrections	Yes
NLO loop calculations	In progress
Output in any language/format	Only Fortran

Stronger

# Development

- Development starts at MadGraph 2009
- Modular Program Structure
- Modern Programming Technique  
"Extreme Programming"
- Complete test suite including extensive module/function testing

Better

# Check List

Leading order matrix element generation	No limitations except time W+5 jets/tt+4 jets realistic
BSM, any renormalizable model	Yes
Decay Chains	No limitations, fast
Color structures	No limitations
Extended color structures (6, 27, $\epsilon^{ijk}$ )	Available (not yet tested)
Effective theories (>4-particle vx)	Yes, no limitations
Recursion relations for multijets	To be implemented
NLO real corrections	To be implemented
NLO loop calculations	To be implemented
Output in any language/format	No limitations, Fortran (MG/ME 4) available

Stronger

# Status

Beta 0.4.2 currently available

<https://launchpad.net/madgraph5>

- 99 % retro-compatible with v4 input
- Complete Majorana treatment
- Complete MadGraph StandAlone / Madevent Output
- Extensively tested against MG4
- Shell mode with help and more options

~ 2.5 times faster evaluation for produced matrix elements

# Development

# BSM: UFO

UFO = Universal FeynRules Output

# BSM: UFO

- New FeynRules output including color and Lorentz structures.  
[Duhr et al]

UFO = Universal FeynRules Output

# BSM: UFO AND ALOHA

- New FeynRules output including color and Lorentz structures.  
[Duhr et al]

UFO = Universal FeynRules Output

- Automatic Helicity Amplitude Generation for any new model (including effective theory)  
[P. de Aquino, W. Link, OMI]

ALOHA = Automatic Language-independent Output of Helicity Amplitudes

# Multijets

- For multijet generation ( $\geq 4$  jets), Feynman diagram formalism expensive (**factorial growth**)
- Helicity amplitude optimization (in MG4/5) reduces run time by factor  $\sim 10$  for complex processes
- **Recursion relations** (such as Berends-Giele) can reduce run time by additional orders of magnitude
- MG5 **perfect framework** for implementation and development
- Work started with exciting prospects in near future!

# MADGRAPH NLO

NLO

Virtual

Real

Born

$$\sigma^{\text{NLO}} = \int_m d^{(d)} \sigma^V + \int_{m+1} d^{(d)} \sigma^R + \int_m d^{(4)} \sigma^B$$

# MADGRAPH: NLO

**V4** **V5**

# Conclusion

- **MG/ME v4** is a **mature**, well established and **stable** code with many features for **BSM** and **QCD** physics and numerous peripheral tools
- **MG5** is **available** with important and unprecedented improvements in all directions.
- Still many **new features** to come in the near future
