## Can CE<sub>\nuNS</sub> experiments probe Dirac vs Majorana nature of neutrinos?

Wednesday, 25 August 2021 22:35 (20 minutes)

Coherent Elastic Neutrino Nucleus Scattering ( $\text{CE}\nu\text{NS}$ ) provide a novel window to probe new physics connected with the well established non-vanishing neutrino masses. In this talk we will discuss how in the presence of a transition magnetic moment of neutrinos the CE $\boxtimes$ NS experiments have the potential to shed light on the nature of neutrinos: Dirac vs Majorana. In particular, we will take the NUCLEUS experiment as an example to demonstrate that through a study of differential energy distribution of the final states the CEvNS experiments can potentially achieve such a feat.
