Viable Full Unification of the Standard Model into E_8

Tuesday, 24 August 2021 21:20 (20 minutes)

A 10 dimensional model with $\mathcal{N} = 1$ SUSY and E_8 as a gauge symmetry will be presented. It will be shown that through the orbifold $^6/(\mathbb{Z}_3 \times F_3)$, only the Standard Model remains after compactification, with feasible Yukawa couplings. Gauge coupling unification can be achieved at energies as low as $M_{GUT} = 10^7 GeV$ with a viable proton lifetime. Therefore the highly predictive extra dimensional GUT model can be within reach of near future experiments.
