## Searches for R-parity violating SUSY with the CMS detector

*Thursday, 26 August 2021 22:35 (20 minutes)*

R-parity violation introduces many viable signatures to the search for supersymmetry at the LHC. The decay of supersymmetric particles can produce leptons or jets, while removing the missing transverse momentum signal common to traditional supersymmetry searches. The talk presents recent results from searches of supersymmetry in these unusual signatures of R-parity violation with the CMS detector.
