Exploring supersymmetric theories from scattering amplitudes

Saturday 28 August 2021 08:50 (25 minutes)

In the past few years, the study of amplitudes have made inroads in connecting with classical dynamics of binary blackholes as well as the revival of the S-matrix bootstrap. We will give a brief overview of the major results on these two fronts and the new light they shed on supersymmetric theories.

Presenter: HUANG, Yu-tin (National Taiwan University)
