# Topics for discussion: Higher-order kernels session

at "Taming the accuracy of event generators", CERN, June 29 - July 03, 2020

- ○ higher order kernels and logarithmic accuracy
- ○ veto algorithm with negative weights
- ○ relation to fixed-order subtraction and matching
- ○ relation between MSbar-like factorization and shower evolution scheme
- ○ accessing parton shower uncertainties
- ○ what's the effect of recoil prescriptions

of course, discussion on other topics very welcome!
